### 1881. Deafness (D-81-002)

Following the appearance in early 1878 of articles about the phonograph, which drew attention to his own deafness, Edison began receiving inquiries about his proposed invention of a hearing aid. (See Thomas A. Edison Papers Microfilm Edition, Part I, 153-166). This folder contains correspondence inquiring about the current state of the invention.

Approximately 20 percent of the documents have been filmed. These items received significant replies or were written by individuals associated with Edison.

# NORTH'S EARPHONE.

A Wonderful Device for the Relief of the Deaf.

re different slow of Sound Bottory, \$1.10 extr

PATENTED MAY 6th, 1880.

Sent C. O. D. with privilege of trial by paying ex. press charges both ways, or free on receipt of price. The No. 2 instrument is the one used most. The EARPHONE enables the deaf to hear in a clear, distinct, natural ione, free from those sooncreas sounds emitted from other instruments. Ordinary conversation heard without the speaker being close. It works ancessfully in most cases at forty free distant, and in others more, its power is remarkable and gives entire satisfaction.

The Emproxes brings into requisition the Trifacial nerve, which passes over the tempte and check to the the upper teed by a telephonic communication with the luner car. The principles involved in the Emropses are the refinement and compression of sound, and means have been discovered by which the round can be related from 100 to 20,000 times, thereby grading them to the different degrees of Portform.

What speciacles are to those having lead sight the EARPHONE is to the Deaf,

The inventor has been dot from childhool, and two me has been been from the firm of the through the proposal theory, No ladyr can possibly come from the use of the Ruberoul, the proposal heating in the second desired, and the continued density is exceptioned by lie use. Edison. Erger Having seen in the Newspapers, that you are capable to do many inventions, I take the liberty to - besearly on to make any good in . strument for deaf men to do them hear and understand huma voices, etc I cannot understand them since the last years. I have always a noise in my head, much Kardes than a human voice. As someth is lander than this noise, for exam ple, a drum, then I can hear it. Also when I go by railway, I can hear the notes of the whells. When I let fall a piece of money, I can hear it by feeling the shake on the flow. I can feel too, that a waggen passes by, without sceingit When'T hie a silver spoon to a

String, and I hold the ends in my cars, when I push it against The table, I can hear the sound a little. I am now 56 years old. Those are many deaf me is the world; thus you should do us a great service, if you would invent some instrument for men, who are, as I, badly doaf, Two those, who are half deaf. there are already, some in this. ments, that help them a little. If an instrument, made by) you, comes in the trade, many) a deaf man of roman should be as willingly, as I to buy pre. I see also. That men with a good hearing have some trouble to hear each other on a journey by Eailway by the noise of the roheels on the zails of is Terhaps you

can make an instrument to help - the human voice to be much low. der than usually; when one speaks - by it to the ear of an other or how Creuse my liberty, and Whink upon it, if you please. I am, Sis, respectfully. your obedient sowant. J. J. Leijds, Book-keepes,

#### 1881. Drexel, Morgan & Company (D-81-003) [not filmed]

This folder contains correspondence about routine financial transactions undertaken by Drexel, Morgan & Company for Edison or his companies. Material relating to Drexel, Morgan & Company's role as a financier of Edison's electric light and telephone ventures can be found in folders on those subjects.

#### 1881. Edison, T.A. - General (D-81-004)

This folder contains documents, primarily correspondence, covering a wide variety of subjects. Some of the material relates to personal matters. Also included are documents that deal with more than one subject, such as a latter about both the electric light and the telephone. Documents concerning subjects that do not fall under the main subject categories are also filled in this folder.

Approximately 90 percent of the documents have been filmed. Duplicate copies of correspondence, third-party correspondence unrelated to Edison, and unanswered fan mail have not been filmed. Unsolicited requests for personal favors, for loans and exhibits of inventions, and for information about Edison have not been filmed except in cases where a significant answer has been found. In addition, there is a nine-page letter from Samuel Insult to George E. Gouraud, dated April 29. Most of this letter is lilegible, and it has not been filmed.

CONTRACT

Concerning TELEPHONIC

Signalling Apparatus

Thomas A. Edison,

Chester H. Pond,

James U. Mackenzie.

Daviey 12/8/

### MEMORANDUM OF AGREEMENT

made this twelfth day of January 1881 by and between
Thomas A, Edison of Menlo Park, N. J. of the first part
and Chester H. Pond of Brooklyn, N. Y. and James U.
Mackenzie of Menlo Park, N. J. of the second part,
WITNESSETH:--

Where as said Edison of the first part has certain exclusive rights to use "Fond's Visual Indicator," so far as applicable to Telephone uses as secured and provided in a written sontract between said Edison and Pond said contract bearing date of the eleventh day of August 1860, and

Where as it was provided by such contract the that said Edison was to develop said invention paying all of the expenses of introduction and otherwise for Telephone purposes, paying over to said Pond one-third of the income therefrom.

Row Therefore the said Edison hereby agrees that he will and does hereby surrender to the said Pond and Mackenzie parties of the second part the entire matter of developing the invention above referred to, so as to make it applicable and desirable for Telephonic use and its introduction, by sale or otherwise, as they the said Pond and Mackenzie may think best.

The said Edison also agrees that all apparatus

which has already been constructed under said contract of August eleventh 1880, shall be and is hereby turned over to the said Pond and Mackenzie for their use in carrying out this agreement.

In consideration of the said Edison making this grant and surrendering of the business herein indicated to the said Pond and Mackenzie, they hereby agree that they will proceed at once to use their every effort to perfect said invention so that it shall be applicable and desirable for Telephonic use and to make avery effort to secure its early introduction, by sale or otherwise, and to pay each and every expense from this date forward, and faithfully and promptly account for and pay ever unto the said Edison one-third of the net proceeds derived from the business herein contemplated, they the said Pond and Mackenzie retaining the remaining two-thirds which shall be divided equally between them.

It is also mutually agreed and understood between the parties hereto that this agreement shall be  $\theta$  of force and binding in all of the United States of America and in the Dominion of Canada only.

IN WITNESS WHEREOF we hereunto set our hands and seals this twelfth day of January 1881 Mileon S. Howell

Merry Monthson.

Dear Mr. Edison:

. We avail of your kind offer to "stir up the animals", as you put it.

We asked Telephone Company nearly a year ago for \$750 em account. It was in June, and perhaps you will remember I showed you the letter of that month, containing the request, which was along the papers at Mr. Cutting's office. Since that time a good deal of work has been done.

We ask now from the Telephone Company for \$1000 on account.

As to Electric Light Co. of Europe, we have on hand half-done business relating to assignments of the patents and interests of yourself, Puskas, Banker and Bailey, under the agreement of May 2, 1879, and will put everything into a bill together as soon as it is finished. Meantime, please have sent us \$750 on account of services to El. L. Co. of Europe. He have never received anything from the Company from first to last, and only \$250 from the Telephone Company.

I wrote kr. Banker, at the beginning of the year that we must ask to have our business for these companies proceed honceforth on a business basis.

We also enclose our bills for disbursements --- actual cash outlays, customarily paid by other clients each month. Some of these bills have been due nearly a year and repeatedly rendered, but without any effect whatever.

My dear Mr. Edison: ---

McLaughlin has been here and left papers for my examination, and says an important meeting of Niocene Company is to be held on Friday, which I must attend.

Lowrey is sick; Stone is sick, and Judge
Porter gone to Virginia. Western Union is also very sick, but
clamoring for Doctor; and I am in it up to my eyes.

I dont intend to work day and night for anybody, without a consideration, and if I am to add this Miocene business to my load, I want to know what we are to got for it.

have treated us unfairly, and as T think you have a clear interest to have the work done woll, T want you to look to it that we get fair compensation for our services, and not empty promises.

Your Companies, I do not hesitate to say,

What are we to have in this Miocene business?
What <u>you</u> say, T find is done. Will you let me know what it is
to be in this case, for us.

Tf it is to be stock and no money, there must be enough of it to stand the racket of the market. If we are to be paid in money, let me know that. Business is business; and I cant take time from paying clients to give it to these companies on the very unbusinesslike and non-paying terms with which we have been put off by them hitherto.

Yours truly,

Ang products.

Illustrious Bir:

Prom Italy, hand of enthusiasm and poesy, comes a cry of admiration wafted to America, land of portentous inventions, and fatherland of the greatest genius of modern times, Thomas Alva Edison.

The noblest prize of our century is the phonograph, with which you like the phonograph, with which you like the car for all futurity.

which was read with great success at the University of Turin, and was received with favor by the first critic of Italy, Vittorio Berezid, as you will see in the leading article reprinted and attached to the Canto itself.

Will you deign, Illustrious Engineer and Professor, to recoive this homage of a poet who feels the deepest admiration for you?

You would greatly oblige if you would notify me by telegraph of the receipt of my poem, which might have strayed on its distant voyage.

I anxiously await news of its having reached your illustrious hands,  $\dot{\phantom{a}}$ 

with highest esteem,

I am, your devoted admirer.

J. F. Bailey.

The undersigned, Joseph Pranklin Bailey, Agorah and living at Paris, Boulevard Haussman, 190, of the first part, and Mr.

John H. Harjes, Banker, living in Paris, 31 Boulevard Haussman, of the second part, agree as follows.

Mr. Bailey sells to Mr. Harjes, who accepts,

First, One part interest consisting of a Sixtieth in a society called the Edison Light for Belgium, Austria, France, Denmark, Germany Russia, Italy, Switzerland, Horway, Spain, and in all of the rights, patents and priviliages which attach thereto, as are, Swimbelted in a contract, concluded Second of May 1879 at Menlo Park, in the State of New Jersey, between Heasrs Thomas A.Edison, James H. Banker Theodore Puskas and said James P. Bailey.

Second, One part interest, consisting of a a twelfth, in a society called the Edison Telephone for Belgium, Austria Denmark, Russia, Germany , Italy and Spain and in all of the rights, patents and privilieges attached thereto, such as are submitted in a contract, concluded the 29th of April 1879 at Henlo Park new Jersey, between Messrs Edison, Samuel S. White, Puskas, Banker, and the said Bailey.

Third, -One part interest, consisting and a Ninth, in a Society called the Edison Telephone for France, and in all of the rights, patents and privilieges which attach thereto, such as are submitted in a contract, concluded at Paris 5th. of December 1878, between Messrs Berthon, Puskas; godillot, Brancy, Ohatard, Evans and the said Bailey. This concession is accepted, by the cash payment of 50,000 francs, by the said Mr. Harjes to the said Bailey, receipt of which is acknowledged. Mr. Bailey reserves the right of repurchasing from Mr. Harjes the Sixtieth, the Twelfth and the Ninth

2

united, before the 15th of August 1680 for the sum of 100,000 frames, and Mr. Harjes engages to transfer all these parts of interes on payment of 100,000 frames in each in his hands before the 15 th of August 1880.

As far as concerns the concession and transfer to Mr. Harjes of the Sixtieth in the Society called the Edison Electric Light, or its retrocession to Mr. Bailey as is cited above, Mr. Bailey engages to obtain from Messrs Edison, Banker and PUshas a written consent before May Is80; failing, Mr. Harjes will have the right to annul the present contract and to demand of Mr. Bailey the sum of 75,000 francs, dating from the 15th of May Is80, as reimbursement, compansation and indemnity. As a guarantee of this sum of 75,000 francs, Mr. Bailey has signed a promissory note to Mr. Harjes' order for the sum of 75,000 francs, payable on the 15 th of May, 1880.

As far as concerns the concession and transfer of a Twelfth and a Ninth, in the said Seciety of the Telephone, Mr. Bailey agrees to obtain, under the same conditions, the written consent of the parties at interest in the said Secieties, in case Mr. Harjes should judge it necessary, and this in two months after demand. It is understood, that, as far as concerns the Ninth conceded (as cited above) in the Telephone Seciety for France, this Ninth, in case a seciety should be formed for exploitation in this invention, shalled not be less than an Eighteenth of the whole.

Mr. Harjes shall remain the repository of these original documents, and Mr. Bailey can have copies made of them. Done in Duplicate in Paris the 20th of Feby. 1880.

The above is approved,

Joseph F. Bailey.

DO. DO.

John Harjes.

Signed, in presence of.

H. Herold

O. STEGEL.

It is understood that the said Mr. Bailey is alone responsible for the debts, disbursements obligations, loans or dies that will have benincurred for the exploitation of the inventions, the patents, and Seafia, formation of the above, in a proportion of parts to his interest, and that for the parts coded by those presents, Mr. Harjes is, and will in no way be held, responsible for the said disbursements, dues and obligations.

-4.10.13

16 mous 1880

This is to certify that I have this day - sold to Ma John Ho. Harjes and shall deliver to him a good & in law valid Bill of sale of the following portions in the Edison's Telephone Companies namely. - One fortich part in the Edison Telephone 6 - for Transc and one fortieth in the Edison Telephone 6for the rest of Europe the two forteeths together for the sum of seven thousand five hundred francs (francs 1500) of which twenty five hundred francs (francis 2500-) Thave rue ved in each and the remaining five thou - sand frames ( frames 5000 -) to be paid to me on the first day of Sopril neat. In case I should be unable to give a clear title to the one fortisth part of the Edison Telephone to for France by reason afnot prosessing it at any time during this cur reint year (1880) I hereby primise to return to Mer. Joh. He Hospis on the thirty for day of Dest 1880. the sum of three those sand seven hundred and fifty fra (franco 3750). - executed in diplicate at Paris the 16 Warch 1880.

h, mitro

The undersigned, Mr. John H. Harjes Banker, living in Paris
31 Boulevard Haussmann, of the first part, and Mr. Joshua, Pranklin
Bailey, Merchant, (living in Paris, Boulevard Haussmann 190; formerly and actually of New York, William Stroet 19, but being domiciled, for the purpose of executing these presents at Paris, 113 Boulevard Sabastopol at the house of Mr. Constant Rousseau his attorney
in terms of the general power given to him according to the deed
and mandates of Mr. Theret, notary in Paris, the 6th of last October,)
of the second part, after having made the following statement:

Mr. Bailey has been first manager and thon, awergare of the Edison American Society of Telephones, his place of business is at Paris, Avenue de L'Opera 45, in course of the liquidation of this Society, and for the purpose of liquidation, Mr. Bailey has personally borrowed from Mr. Barjos the 20th of Pebruary last, sums which according to the account and amended, before this date, have amounted to a total of one hundred thousand france, and which do not apply to any other operation made between the above mentioned particisthe 16th of the last March, and which have been made the object of the second arrangement.

The sum of one hundred thousand francs being demandable, Mr. Harjes consented to grant time to Mr. Bailey with security given an Anta the hartes are appear as frecuency regulated, and this understanding the parties hereto have complied as fellower.

## Article I.

Mr. Harjes,on the solicitation of Mr. Bailey, grants him to the 14th of April 1881 to deliver the above sum of one hundred thous-

2

-and francs which, up to this date, the 14th of April, 1881, and from the 15th of last August, will bear interest at five per cent per annum, payable at the same time with the capital.

# Article II.

As a guarantee for this sett, and conformable to the terms of Article 91 of the Commercial Code, Mr. Beiley putras: colatteralty in the hands of Mr. Harjes, who acknowledges the same,

First: one hundred and thirty-four phideup shares of the General Society of Telephonos Edison, Gower and other systems doing business in Paris, Rue des Petits Chemps 66, Limited, with the capital of eight million, six hundred thousand frames, and the condition of the control of the control

Second: Two bundred and twenty shares of the Edison Electric Light Company of Europe limited, of New York, represented by the four following certificates, 4,000, certificate number one hundred and four of one hundred shares in the name of Thomas Harland, transferred on the back to Mr. Beiley, dated the 8th of October 1880.

- 2. Certificate: No. 105, of 100 shares, in the name of the same

  Nn Harland, with the same endorsement to Nn Bailey.
- 3. Certificate No. 66, and 10 shares in the name of Nr. Bailey, endorsed for the purposes of these presents, and signed in blank by Nr. Bailey.
- 4. Gertificate No. 77,of 10 shares in the name of Nr. Guy
  R. Pelton, with endorsement in blank signed by the said Pelton.
  THIRD: 40 shares of the Edison Telephone company of Turope, A
  Limited, of New York, represented by the two following certificates:

1,84e, Certificate No. 24,of 16 shares in the name of Thomas Harland, endorsed to Mr. Bailey, 4th of October, 1880.

2., Two. Certificate No. 26, of 32 shares in the name of Mr. Bailey, with endorsement for the purposes of these presents, signed in a blank by Mr. Bailey. These two certificates representing 48 shares, being 8 shares more than the 40 given as collatoral, Mr. Bailey may dispose of these 8 shares in excess, by severing title as regards Mr. Harjes; the latter, however, always retaining the 40 shares of the Edison Telephone Company, as collateral, until payment is made, or until the sale of the collateral.

### Article 3.

In default of payment after the expiration of the 14th of next April, Mr. Harjes, conformable to Article 93 of the Commercial Code, and 8 days after a single notice given to Mr. Bailey, can proceed to sel, at Public Auction, the shares given as collateral according to

2.

these presents, and can apply what is necessary to the liquidation of his claim of 100,000 francs and costs.

### Article 4.

It is here observed that Mr. Edison can pay to Mr. Harjes, before the 14th of April next, a sum of 33,333 fruncs and 33 centimes on account of this 100,000 francs due by Mr. Bailey: A although the cash may be paid, nevertheless the collateral shall not be diminished, and shall remain as an entirety until all payments are made, or collateral sold.

### Article 5.

The expenses of the registration of these presents, (if that formality shall become necessary) shall be borne by Mr Bailey, as well as all the costs, although the cash may be paid nevertheless, of execution.

Done in duplicate the 13th of November, 1880.

I accept the Contract.

John H. Haries.

T, the undersigned acknowledge that Mr. J. F. Bailey has delived on magnetificates of the following values, A of our agreement of last March: that is to say:--

First: Three certificates for eighteen shares ofer the Edison Telephone Company of Europe, Limited, which certificates bear numbers 26,25 and 22. The certificate 26 for thirty-two shares, of which 24 are applied to the guarantee of the 30th of last November, and eight to the present. A certificate 25 and 22 each for five shares.

Second: Certificates for 45 shares of the General Society of Telephones for France bearing the numbers 667, for shares 3287 to 3300; the surplus of shares of this certificate applied to the above mentioned guarantee, and certificate 053 for shares 871 to 000, the surplussof this certificate remaining in the hands of Mar. Harjos, entirely paid up; receipt of which is acknowledged.

Of my free will and accord, I agree to resign to Mr. Bailey the 45 shares of the General Society of Telephones, in consideration of the sum of 4500 francs, on condition that Mr. Bailey makes a call for it before the 15th of next April, and conditioned upon my being reimbursed before the 15th of April.in the sum of loc,coo francathat being the object of the deed of gurantee that passed be tween us the 30th of November 1880.

Paris, 9th December, 1880.

John H. Harjes.

Edison Floctric Light Company.

New York, Apr.11.1881

Mr. Harges: --

Dear Sir: --

As you know, since that has been under discussion, we have to present Mr. Edison an account of the expenses of which he has to bear one third, of the sums which you set aside for bloke frame, the mean thank that been from this expense—and which you have kept apart—are quite insufficient, after you set.

We have regulated between us all that was required on your personal account, but none of that which was due uson the account of Mr. Edison. We will, therefore, present the account to be regulated in thirds between usand Mr. Edison, reserving besides, the privilege of communicating. them Mr. Edison, but we believe that we ought to submit them to you, since the power of attorney that you have from Mr. Edison is always in force, you having received your commissions, it is reasonable that you should do for us what we have done for

To resume: -- We will keep these accounts and await your reply to the demand made on the part of Mr. Edison.

Copy of this action to Mr. Harges, cent from breuna by

JAMES U. MACKENZIE CHESTER H. POND. Contract in regard to TELEPHONE INDICATOR anil 30/11. This AGREEMENT made this 30th day
of April, 1891, by and between JAMES U. MACKENZIE of New
York, party of the first part and GHESTER H. POND, of
Brooklyn, party of the second part, WITHESSETH that

WHEREAS, the party of the second part by an instrument bearing date August 11th, 1880, did convey to Thomas A. Edison an undivided two-thirds interest in a certain invention in Electric Visual Indicators so Far as the same should be applied to the Telephone with full power, control and management of the development, display and sule of such application of said inventions subject to certain limitations therein contained and

WHEREAS the said Thomas A. Edison did by an instrument bearing date January 12, 1881 surrender and convey to the parties hereto the entire matter of the perfection and introduction of such application of said invention in the United States and Canada and did convey to the parties hereto equally one-half his interest in said invention that is to say, one-third of the whole thereof, on the agreement that the parties hereto would use every effort to develop and perfect said invention making in connection with other transfers the said parties equally owners thereof and

WHEREAS the party of the first part is an inventor of an improved Electrical Transmitter and which so far as the same is applicable to Telephone purposes is

owned by the same parties and in the same proportions as the said Electrical Indicator and \_\_\_\_\_

WHEREAS, the party of the second part is desirous of obtaining the entire control of said inventions

NOW THEREFORE the party of the first part in consideration of the premises and of the sum of \$1,000 to him in hand paid the receipt whereof is hereby acknowledged doth hereby sell, assign, transfer and set over unto the party of the second part one-half his interest in said inventions, that is to say, one-sixth of the whole of each of the said inventions, so that the interest of the said parties in said inventions as they may be applied to the Telephone shall be Thomas A. Edison one-third; the party of the first part one-sixth; and the party of the second part one-half; and the party of the first part doth also hereby grant to the party of the second part as part of said arrangement subject however to the approval of said Thomas A. Edison the entire control and management of the development and display and application and sale or rental or otherwise of said inventions with the same force and effect as but for the execution hereof the same is vested in the said parties.

AND THE PARTY OF THE SECOND PART ugrees to account upon demand or within ten days after closing any trunsaction to the parties and in the proportion above-named for the net profits of the business herein contemplated.

And the party of the second part agrees not to sell or transfer for the purpose of raising capital to develop

and display said inventions a greater interest in said invention than one-sixth of the whole thereof.

AND THE SAID PARTY OF THE FIRST PART doth hereby covenant to proceed with all possible speed and dispatch to have his said invention for a Transmitter and any improvements thereof protected by Letters Patent in the United States of America and at the expense of the party of the second part and at any time when requested to  $\ensuremath{\mathsf{ex}} =$ ecute and deliver to the party of the second part such assignment transfer and license as the said party of the second part shall be advised by counsel shall be necessary to vest in the said party of the second part and the said Thomas A. Edison in the proportions hereinbefore stated or in any corporation to be formed to operate said invention the right to use the said inventions so far as the same can be applied to the Telephone and the party of the first part doth also agree to convey in the same proportion any improvements that may be made with his knowledge upon said Transmitter and to advise and assist the said party of the second part in his efforts to develop and bring into practical operation the said invention not intending however, that he shall devote his whole time thereto or to interfere in any way with the prosecution of any other employment or business.

AND THE PARTY OF THE SECOND PART hereby agrees to use all reasonable and diligent exertions to develop,

perfect and bring into practical operation the suid applacation of suid inventions and he hereby agrees to sell and transfer to the party of the first part on April 30, 1882, on the payment by him of \$500 one twenty-fourth part or interest thereof but without the privilege of the party of the first part to assign or transfer this option

And this AGREENENT shall not go into offset unless the consent of the said Thomas A. Edison to the terms thereof shall be endorsed thereon and it is intended to be limited in its operation to the United States of America.

IN WITNESS WHEREOF the parties hereto have hereunto set their hands and soals the day and year first above written.

IN PRESENCE OF

Chier, 76, Poud

Ö

I approve and consent to the terms of the foregoing instrument.

My Dann "

My Dear Colonel: -

T duly received your kind favor of May 21st. which reminded me that I had abstained from writing to you for almost a month. My apology for this must be the great press of business that we have to deal with, but for the future I hope to be able to send you a letter weekly as I promised.

## English Telephone.

I have read your letter addressed to Mr. Edison dated May 21st. In it you seem somewhat to have mixed up my letter of the 29th of April with his letter sent somewhere about that date. This rather confused him and he required some explanation from me as to what I had been writing to you. I would prefer my letters to you not being quoted in any letters addressed to him. I am very glad that the Construction Company met with so great a success and trust that the dividends it will earn will, to some extent, justify the enormous premium at which the shares now stand. If you can hurry the settlement of the Edison reversion in the London Company any you will confer a favor on Mr. Edison as he would no doubt be very glad to receive the funds due from that quarter. I suppose, however, like all other matters that get

into the English law courts, will require some considerable time as our legal authorities in the old country seem to aim at the point of "how not to do a thing." Your letter with enclosures relating to the Glusgow Company has just arrived. You will no doubt hear from Mr. Edison on this matter in the course of a mail

## Oriental Company.

or so.

If I have time I shall write you an official letter to night explaining the status of the Le Gendre matter, but I may here state that Mr. Edison considers the Le Gendre contract null and void as he has done nothing whatever to push Telephone matters although he has had a contract for about a year. Mr. Edison is by no means afraid of Le Gendre troubling us any, but you may rely on Edison doing his very best in the matter. You may probably have thought that we quite overlooked this matter as you heard as doing his very best to straighten the matter out; and I myself was also occupied considerably in attending to this matter. You must not think that simply because you do not hear from me that he and layself have entirely overlooked the matter.

## Electric Light, England.

You wrote Mr. Edison some time back stating what your ideas were as to how the Light Company should be completed in England, namely, that the whole of the stock should be issued:

that money for actual work done should be obtained by the issue of debentures. Mr. Edison did not look upon this proposition with favor at all. He seems very adverse to overloading an Electric Light Company by issuing stock in this manner. The fight with the Gas companies will be quite hard enough even if we obtained money on the stock itself, but how it would be if the thing was loaded down by issuing stock working on debentures it is hard to say. The plant for England will be of the very best. The Steam Dynamo which is to be sent will be capable of running no less than twelve hundred lights, and the outfit will in every part be of the most finished character. The workmen at Edison's machine works are working night and day to get this out, so that not a moment is being lost. Mr. Edison is highly impressed with the great importance of meeting his opponents in Englandby an exhibition of his light at the earliest possible moment. It is practically decided as to Johnson's going to England. He will in all probability give his undivided attention to the preparation of the plant from next week forward, and you well know that when johnson takes up a thing not a stone will be left unturned in order to get it out by the required time. The exhibit in London will no doubt be a credit to the name of Edison.

The Electric Congress, Paris.

As I wrote you some time back Nr. Edison is thoroughly aroused to the necessity of making the best possible exhibit at

4

He will have no less than ninety two groups of Exhibits Paris. besides his Electric Light. The Automatic, quadruplex, stock reporter, telephone, phonograph, electric pen, in fact overy thing so far as it is possible that he has brought out will be exhibited at paris. I have seen a good many of the exhibits which are already finished. They are got up in extremely nice style, and I think that the English and other inventors will have a hard fob to show anything to equal it. I know that you have for a very long time past wished to see something of this character on the other side of the Atlantic so that justice might be done to Mr. Edison and his inventions, and, unless the electrical public are very greatly projudiced against him, they cannot but be convinced of the practicability and universality of his inventions. The Electric Light outfir for Paris will be equally complete us the one just going to London. In fact it will be an exact counter part of it so that at one and the same time London and Paris will be able to see Mr. Edison's light in its perfection.

T will write you fully us to other matters by next week's mail.

Very faithfully yours;

BU.
If you have any klayrophic, ble phonic or blockers appearant that you can upace - this would be a good place to know it, in fruct thalk to good if you will do what you can for the public if you will do what you can for the public as I planted the to let the public hum.

# Telephone Training School,

UPPER NORWOOD.

Patrons :

Truster:

COLONEL GOURAUD.

PATRICK CARNAGY, Esq., C.I.E.

FREDERIC CLIPF, Esq., LLD., CAMB.

Although the invention of the Telephone is of but recent date its introduction has been of such rapid recent date its introduction has been of such rapid growth as to have already given employment to a large number of experts, for whom the demand is constantly increasing and may be safely said to have already exceeded the supply. It is to meet a demand which for many years to come must of necessity increase that the Telephone Training School has been established.

Course of Practical instruction will be the essential feature Instruction, of the system, and to this end every description of Apparatus, Telephone as well as all apparatus apparatus in the system.

thereto, for both exchange systems and private communication will be provided, and so far as possible in duplicate, so that purplis will have the opportunity of dissecting and reconstructing the

Tools and materials for making those parts of the various apparatus that can be made by hand will be various apparatus that can be made by hand will be firmished, and every facility given for conducting experiments by those papils whose tastes incline them in that direction. Complete working Telephone exchanges upon all the various systems in use in different countries will be in practical working cales and noulle will be taken to be in the property of the proper order, and pupils will be trained to every department of their manipulation.

Tools, poles, wire, insulators, brackets, &c., will be supplied for outdoor construction, concerning which practical instruction will be given. Pupils will then be enabled to avail themselves of testing their

then be onabled to avail themselves of testing their own shillies, under personal supervision.

Testing apparatus will be also provided, with which upplis will be taught to measure the electrical resistances of the various instruments, batteries, and wires, and the noroe important matter of localizing faults, both in apparatus and on the line

Pupils desirous of extending their studies and practice to Telegraphy will be afforded every facility for doing so.

While the course of instruction will be essentially practical the theoretical will not be neglected.

All the leading scientific journals will be provided. Application, Application for admission into the School must be made on forms provided for the purpose, which may be obtained from the Principal.

Board and Board and residence can be obtained on reason-Residence, able terms in the neighbourhood.

The School is situated in a most healthy suburb of London, and includes about two acres of ground,

Profit of This Institution is not established with a view to School. profit, but, on the contrary, it is provided that any
surplus, after the expenses have been covered, will
be applied to the bonofit of the School.

Duration of The course of instruction may occupy from one Course, to three terms of about three months each, desending upon the previous experience or aptitude of the

One term ... ... 50 gainers. Two terms ... ... 55 gainers. Three terms ... ... 70 gainers. Fees. One term

N.B.—Although the list of patrons includes a number of gentlemen prominently connected with the Telephone Com-panies, it must not be inferred that appointments in these companies will necessarily follow.

CHARLES E. WINTER,

Associate of the Society of Telegraph Engineers and Electricians, Clectricinn & Principal,

BINSWOOD, BEULAH HILL.

UPPER NORWOOD.

New York, June 11th. 1881. 65 Fifth. Ave.

My Dear Colonel

I beg to confirm dispatch to you of letter of June 3rd. which I hope you will receive in due course.

Fruit Experiments.

From your letters to Mr.Edison you seem to have assumed that the question of preservation of Pruit was absolutely settled last year and that there would be no further difficulty about the matter. As a matter of fact it requires considerable experimenting and although Mr.Edison propose to ship some fruit and other things to you during this season it has not yet proved a perfect success. Of course he intends working on it until it is, but I thought it as well to make these remarks in ease you should be under the impression that the question is settled beyond a doubt. One of Mr.Edison's assistants has been down to Delaware and made arrangements there with a peach farmer by which he will be able to put the fruit up in carboys, exhaust them and ship them right from the farm itself. As soon as the season commences you will no doubt receive some considerable trial shipments and in the mean time you will get from us various experimental packages.

Ore Milling.

I have been down to Quogue this week with Mr. Edison to see his magnetite ore separator in operation. You may remember receiving from me about 6 months ago specifications for patents

to be taken out in several foreign countries your consideration for doing so being that you were to receive a certain interest in the invention in those countries. What they are doing here is to pass the black sand, which is found in very large quantities on the coast of Long Island and which contains about twenty per from cent of the purest ore, through the magnetic separator and the results they get are of the best character. You may remember that Mr. Edison originally experimented with this invention with the idea of abstracting from gold tailings all that is magnetic and so more easily work gold, but he finds that instead of throwing the magnetic portion away it can be worked up into the very best iron equal to Swedish bars at a cost which makes it far more valuable than working the gold tailings. To the best of my recollection when you received the specifications for the patents very little was done in the matter. I think that we filed the the preliminary specifications in several countries and I feel certain that nothing was ever done in the matter. I think it would be well for you to look into this matter and get these patents straightened out as wherever black sand is to be found this invention will be very valuable indeed.

Telephone General.

"I sent you a number of letters the early part of this "week" on the subject of Telephone matters and should be very glad."

If you could settle them up as quickly as possible. With reference to that question of the Glasgow royalty Nr. Edison seems very

decided in his opinion, and I cannot say that I disagree with him. You well know Johnson's views on this subject and mine are pretty nearly identical with his. We have hear nothing from you for some time with reference to the European Tolephone Company and are consequently considerable in the dark as to how this matter is going on. Several times Mr. E'ison has asked me if I have heard sirything from England about it, but as I was to hear from either Mr. Bailey or yourself, and, as Mr. Bailey has been such a short time. There is a large of the subject.

Pond Indicator.

When I first got here I wrote you that I would get you some information as to the present state of the rond Indicator.

By time has been so very fully occupied ever since my arrival that it was not until a very few days back that was able to go and make in inspection of that very useful and complete inventions. The commentum is very complete in every respect whether it be simply for messenger service or for use in connection with the simply for messenger service or for use in connection with the simply for messenger service or for use in connection with the simply for messenger service or for use in connection with the simply for messenger service or for use in connection with the simply for messenger service or for use in connection with the simply for messenger service or for use in connection with the simply for messenger service or for use in connection with the simply for messenger service or for use in connection with the service messenger from complicated whereas now any child could operate it in the satisfiest possible manner. He Kenzie has invented what he terms the simple from one up to a thousand, or it could be arranged to go beyond that. This is done

by such a simple movement that it is impossible for a mistake to be made and if it were adopted throughout the Topephone system in England would undoubtedly greatly increase the reliability of the Service. I think you would do well to look this matter up as IV mist play an important part in the future of the Telephone. I understand that it will be exhibited at the Paris Exposition and it is probable that our friend No. Kenzie will be in charge.

There is very little to say to you with reference to the preparations for the exhibit at Paris 

Nr. Batchelor is hurrying forward as quickly as possible and hopes to get every thing there before the opening! Electric Light matters here are about the same sains. Our men are still wiring houses with astonishing rapidity with the canvassers at the same time getting just as many orders as they like to apply for Your exhibition plant for London is well under way and will be shipped a very little after the time that the one starts for Paris.

Very Faithfully yours,

(Samuel Issuel)

The Edison Electric Light Company, 65 Fifth Avenue, Contract which I have this day formally Executed kardamine to the transfer of Indicator System and Inackingia's Eignal transmitter in France Relgium and another contains no provision for any Inturo imperorements on said invention now threnton I herby again and Covinant in consideration of the Carch and stock permedal for in said contract that I will assign to generally as Grutte or to any other party designated by you all my sight title and intenst in any and all imperoruments which may be made in either invention during the life of the Kentinto by either Pond Wackengie

or others which I moglet our cultitled to

Witnessed Otto Holloves

This AGREEMENT made this 17th day of June 1881, by and between Thomas A. Edison, of Menlo Park, in the County of Middlesex and State of New Jersey, of the first part, and Galvin Goddard, Trustee, for the "Pond Indicator Company of Europe" a corporation about to be organized and incorporated under the laws of the State of New York, of the second part,

#### WITNESSETH

Whereas, the party of the first part is the owner of an undivided two thirds( 2/3 )interest in the inventions that constitute the "Pond Indicator System" as applied to telephonic signalling, in the countries of France, Belgium and Austro-Hungary.

And whereas the party of the second part is desirous of acquiring the entire interest of the party of the first part in said inventions in and for the countries mamed,

Now therefore the parties have agreed as follows;

I. The party of the first part, in consideration of twentyfive hundred dollars (\$2500) to him in hand paid, and the
covenant of the party of the second part hereinafter set
forth, has sold, assigned and set over, and does hereby sell
assign and set over unto the said Calvin Goddard, Trustee,
and unto his legal representatives, his entire right, title
and interest in and to the inventions that constitute the
Pond Indicator System, and in and to all Letters Patent that
have been and may be granted for such inventions; in the
countries of France, Belgium and Austro-Hungary.

2. And the party of the first part hereby covenants and agrees for himself and his legal representatives, to execute all such other transfers, assignments conveyance and papers that may be necessary to convey his interest aforesaid to the party of the second part upon the demand of the party of the second part.

3. The party of the second part covenants and agrees for himself and his legal representatives to transfer and deliver to the party of the first part, in addition to the twenty five hundred dollars (\$2,500) aforesaid, Addition per 300 cont (16)

b) of the entire capital stock of the Pond Indicator Company of Europe, in full paid stock, when said Company has been duly organized and incorporated and the stock

issued. \_

IN WITNESS WHEREOF, the parties to these presents have hereunto set their hands and seals the day and year first above written.

This a Edison

New York, June 17th.1881.

My Dear Colonel: -

## Fruit Experiments.

In my letter to you of June 11th, I should have stated that the appliances requisite to start this business will take a considerable portion of the amount which you cabled over to Er. Edison on this account. It requires a 4 horse power engine, and Archimedean serew in connection with mercury pumps, a moveable frame building which can be put up with ease wherever the Peaches are contracted for, an account of all of which I will endeavor to send you haxt week. Experiments are now being made to the end of finding out the best way to seal the carboys in which it is proposed to ship the fruit, and no doubt by the time the season comes round Mr. Rughes, who has this matter in charge, will be quite ready to send you some considerable shipments of fruit and other things.

I have seen your various cables to Mr. Edison and Drexel,
Norman & Co. on this matter. As you will have learned from Johnson's cable to you Mr. Eduson and he are decidedly of the opinion
that to show the light off to good advantage you should wait until
Johnson can set up the 1200 light machine. Johnson hopes to be
able to get off by the Arizona which sails on July 19th. Every
thing is being done to get the machinery ready by that time, and
I may mention that only to day the Porter Allen engine to be att-

Electric Light.

ached to the direct acting dynamo arrived at our machine works. I have just now come from the works and am sure that if you could only see the system upon which things are managed there, the great rush with which our superintendent is trying to turn out the nocessary plant for England, you would have confidence that it is utterly impossible for any shop either on this or the other side of the Atlantic to do the work quicker. I expect that in bhe course of 10 days or a fortnight the engine will have been attached to the dynamo and the thing thoroughly tested in anticipation of ship ment. Our lamps are showing very wonderful results indeed. You may possibly remember that Mrº Edison estimated their life would be about 300 hours whereas so afr we have found that they will last considerably longor. T think T told you in a previous letter that we started lighting here on the 24th of Narch and up to the present time not a single lamp has broken. Down at Menlo Park at the lamp factory there are some test lamps which have been lit about 790 hours and the re are many who venture the assertion that before these play out the lamps will have reached an average life of 1500 hours. This, of course, means much greater economy and must of necessity render the great task before you in floating the invention considerably easier. I see in one of you telegrams you refer to John Render's company having bought the Maxim patents. T wish you would just buy a copy of these patents and a copy of Mr. Edison's and satisfy yourself as to the very great difference

between the dates of them, Mr. Edison's patents being so far in advance of Haxim. An article appeared in the New York Sun some few days back stating that it was impossible in the present state of the art for an incandescent electric light to compete with gas. Now, as a matter of fact, our gas here would have cost us more than a dollar a night more than does Mr. Edison's light. This calculation is not made alone by Mr. Edison, but has been verified by the Chief Engineer of the Colpany who supplied us with the steam engine for driving our dynamo. He made the most exhaustive tests as to the amount of coal consumed and after making the most liberal ullowance for interest on investment, depreciation Werste ted to me thas afternoon that Mr. Edison's estimate was considerably below the mark and that if we waited until the end of the year and reckoned up what it had cost us we should find that the saving was decidedly over a dollar per night. In this connection I may mention that a meeting of the stockholders of the Maxim company was held on June 7th. at the Equitable Building when the Secty. stated in answer to a question put by a stockholder that lighting by incandescence is now more costly than gas, but electric lighting is in the position that lighting by gas was when it was first introduced. He further stated that it was only a question of overcoming certain difficulties (mechanical ones) and perfecting the requisite apparatus the experiments for which would ultimately accomplish the desired end, i.e. produce a light cheaper than gas. Now this is no rumor but the official statement made at the meeting

I notice among thos

of the stockholders of an opposition company. present were a number of your associates in the Mercantile Taust and I think they are sincerely to be pitied as the chances for the getting back what they have invested seem to be very slight indeed, Tr Mr. John Pender has bought the Maxim patents I do not think it will take very long for him to discover when the Maxim light is put into operation in London that he has made a great mistake although I presume his real object is to get a certain vested interest so as to compel the Edison Company to buy him out. The various exhibits for Paris are rapidly approaching completion. In fact quite a number of packages have already been shipped. I have seen a good many of the instruments and was immensely pleased with the style in which they are got up and the show that they will make will be decidedly a brilliant one. In my Last letter to you I referred to the Pond Indicator. Since then I understand that the rights for Belgium, Prance and Austria have been sold for a vory handsome sum. I think you agreement with reference to this only refers to the indicator as applied to Telephone. You certainly should endeavor to get the complete control of this invention for overy purpose for England. T think that you would find it a very good thing.

When I write you next week I hope I shall be able to give you really definite news as to when you may expect the electric

Very faithfully yours

It could not have continued except of my mustitles, hurried life thing London & Paris since 24 24mg Which less it allowed in deting down to any course 2 suppose The 50 de been returned in acc Dailren Engl

· My Dear Colonel: -

I have written you weekly for some time past, but have not received any note from you as to whether you have got my letters. I presume, however, that they have all arrived and that you will see whether you can find time to write me. When you have a little time to spare I should like a line from you giving me some general information as to how matters progress in England.

#### Pruit Experiments.

Your lotter relating your experience with the chops, and steaks and strawberries came duly to hand. Mr.Edison was really amused by it, and he wished me to say to you that he is highly delighted that the first attempt should not prove successful as it would be really too bad to find that he was working on a thigh that any man could make go all right, and that one XXXX guarantee against infringers when he does got the thing to work in proper order will be that they will have the same difficulty in getting an efficient process, and will in fact have to go through precisely the same experimenting on some new invention. But, of course, the fact that because those chops emitted such an abcainable smell will not deter him from continuing his experiments which will no doubt turn out all right eventually. From my previous letters you will have understood that your report as to the condition of

what you receive does not surprise him in the slightest degree.

Electric Light.

The plant for England is being pushed ahead as quickly as possible. We have the Porter-Allen engine which in is to operate the machinery already in our shop and the dynamo is far on the way to completion, and as Johnson is giving the whole of his time to seeing that this equipment is rushed through you may depend that not a moment will be lost. We had the Paris machine running a fow days ago for a short time, and a splendid sight it was to see the thing running. The dynamo is of course, the largest in the world and will put into the shade every thing that opponents can bring both in the way of economy and efficiency. Yours will be if anything, better than the Paris machine, in asmuch as Edison will profit by his experience in the manufacture of the Paris machine, and if there should happen to be any slight defects in that they will be rectified so far as the London outfir is concerned. Our lamps are showing a wonderful record. The way in which Er. Edison arrived at the conclusion that the life of the lamp was from three to four hundred hours is as follows. He would set up a number of sixteen candle lamps at about fifty candle power and run them at this state of incandescence until they played out. Now, of course, this was no fair test as the lamps are only made to run at sixteen candle and to run them at fifty would entirely alter the conditions, The first real test as to how long the lamps would last at sixtoen candles is now being made. Up to the present moment they average about seven hundred and thirty hours each. One went

out after burning seventy hours. Another wont out at one hundred and sixty. Another went out somewhere in the neighborhood of three hundred. The fourh one has just died. The remaining six of the original ten lighted have up to the present been burning nine hundred and ninety hours. How long they will last, of course time alone can prove. The longer they do last, of course, the better is the average life of the lamp, and anyway it would appear that the average life will be considerably above one thousand hours. These ten lamps were just taken out from our ordinary stock and therefore the average will be an absolutely fair one. We are watching this test with very great interest indeed. Vou will appreciate the very great importance of getting the life of our lamps as long as possible as it must considerably affect the econony of the system. The lamps in this building still hold out. As I have already told you, we lit up on the 24th of Earch and not a single lamp has yet given way.

#### Telephone. .

They seem a long time settling up that Edison Telephone Company of London liquidation. If you could send Mr. Edison the proceeds of the sale of his shares it would be of very great advantage to him at this time. What with his lamp factory, machine works, tube company and laboratory he requires a very great deal of money, and if he could collect what is due him on English Telephone rightsway it would save him some considerable anxiety. I will send forward the release which Romshaw sent us to be signed

4

by Rdison and Johnson by next mail. I propose sending it to you as there are a number of bhanks that require to be filled in and we prefer that the release should be in your hands until this is done.

Very truly yours,

(Insuel)

"Lelephone - Foreign - England"

1 duly received your favor of the 17th inst.

which I can assure you was very welcome. Glad you like the letters printed on the Type Writer. An expert type writer can write
about three times as fast as with the pen. Of course I do not
use a Type Writer. I simply dictate them and they are written
off in a very little time indeed. I think that an expert operator on the machine can write about 60 words per minute. Besides
sy Te not in the least tiresome.

### English Telephone.

T enclose you herewith release to Mr. Alfred C. Renshaw duly executed by Mr. Johnson and Mr. Edison. I also enclos you a laster addressed to Mr. Price, the liquidator, by Mr. Edison. You will notice that in the release there are a number of blanks which require to be filled in. Mr. Edison said that he would prefer you hold the release until these blanks are filled in when you will kindly hand it over to Mr. Renshaw. I shall cable you to day "Whishaw"s release mailed. I am glad to hear that you look rowward to reaching an early settlement of the Edison reversion.

Oriental Telephone.

Mr. Renshaw will have received long ere this a document?

you state, namely, Mr. Bell's remissness in signing the agreements and sending them on to you. When may we expect a remittance on this account?

## Electrical Congress.

The exhibits for this are being rapidly finished. So soon as an instrument is got ready it is shipped off to Paris. Most of the things will go on June 20th, on which day Mr. Batchelor expects to sail with the large dynamo and engine attached to Paris so that he will be there just about the opening of the Exposition, and will no doubt be able to light up about a fortnight afterwards. Every thing is being got up in splendid style, and Mr Edison's exhibit will doubtless be the finest one there. 'It must add materially to his reputation and dispel the adverse criticism as to "" his never having done anything which one so often hears at home from people who know nothing about the matter, and consequently talk the more. Your electric plant is also being hurried forward as fast as possible. It will sail in all probability immeditely after the one that goes to Paris and will be if anything superior to that one. You will have by far a finer engine as it is one mad by the Porter-Allen people of Philadelphia. In your dynamo any Prettle faults that it is impossible to rectify in the Paris achine owing to the want of time, will all be set right. Johnson hopes to sail early in August, probably about the 4th or 5th .. He was Is now giving his whole time to hurrying up your plant. Mr. Fabbri WITT sail on Wednesday next. I am collecting for him statistics and bearing .

that we have not got here in New York as to our proper working and also maps showing all the lights in the first district and another map showing all the power used in the district. These will be extremely interesting and at the same time very useful.

Am also getting for him photographs of our lamp factory, machine works and laboratory which will be quite an interesting exhibit.

The almost tired of talking about lamps. That set of test lamps are still burning the last report being that they had lasted about 1050 hours. They have not had them buring much this week owing to its being holiday time, your fellow countrywien having been engaged in celebrating the defeat of the "blasted Britishers" There is really nothing much to report us to progress of matters here. Every thing proceeds very quietly, but at the same time rigidly towards completion.

### Fruit Experiments.

We have had put up at Henlo Park a frame building capable of being taken to pieces and moved to the ground where we shall pack our first peaches. These peaches will be packed and put in carboys to exhaust right away so that we shall not suffer from their specified owing to their being kept several days prior to their leaving in the New York market. Mry Hughes, who has charge off these experiments, will have everything ready to commence work as soon as the peach season arrives. Edison believes that peaches will be the best to deal with in the first instance, but I suppose as we get more into the true inwardness of the thing they will be

able to ship other fruits, and no doubt flesh and fowl without having such disustrous results as your boing affected by the nauseous smalls emitted from putric chops and stoaks.

Very truly yours,

(Insull)

Col. 900. E. 9011 rand. Park Telephone - Fareign - England"

My Dear Colonel: -

I have been sending you newspapers consining quite a lively warfare between us and our opponents. I send you by this mail a complete set of these newspapers together with any other you may not have received up to date. I think these will prove of very considerable value to you as the statements made by Major Eaton were very carefully weighed before they were given to the reporters and may consequently be taken as absolutely relaible. If Mr. Tabbri has not got those pupers as well would you kindly show them to him.

Your plant is being pushed ahead as quickly as possible.

Johnson is making his arrangements to sail some time the end of this month. Whether he will get off by that time T cannot absolutely say but will no doubt be able to let you know next week.

English Tolephone.

We were very much in the dark about what you had done and to the London reversion. We could not at all understand how it was that there could be a mistake of about six or eight thousand pounds in our calculations as to how much was to come to Mr. Edison. As he has already written you we simply went on your own statement and the information supplied by me which was substantially the same as that which had been written by you invision at told Mr. Edison the result of our frequent discussions on the matter prior to my leaving London.

As to European Telephone we presume that your last combination must have fallen through as Mr. Roosevelt told us that he heard from Gower that it was an even chance as to whether the empany was floated or not successfully in consequence of the action taken by Mubbard. If you have not already done so will you kindly upon receipt of this write us upon the matter as when ever I go down town the European Telephone Directors put a lot of Inquiries to me as to what you are doing in Telephone and as 'I have no reliable information I am obliged to confess absolute ignorance which does not seem to please them your much.

The documents you want as to Oriëntal Telephone are now being prepared. We are going to try and give the Oriental Company a clear title to Australia. Edison has a memorandum agreement with the Western Electric Light Nanufacturing Company and although their agent, Mr. Wells, has been back from Australia some considerable time he has not been up here to impart any information to us and we know he has been equally remiss in giving a dam'sdecount of the royalties due. We know that there must be something coming to Edison as exchanges have been established in 18000ral edities in Australia.

T suppose ore you receive this you will have seen the various exhibits sent to Paris. I am sure you cannot but be proud of your connection with Edison when you see such a splendid array of his various inventions. It would no doubt be gratifying to Mr. Edison if you were to write him what you hear as to the opinion of English electricians and scientists upon his exhibits.

Re has made this collection of his various inventions at very

great expense indeed to himself. Cunnot you influence Conrad
W.Gooko, of the Engineering, to write them up thoroughly for that
paper. Will you please see that we get all English papers conta
aining any notice of Br.Edison's exhibits as T want them for
filling?

very truly yours,

P.S.T was running up quite a little bill for shorthand expenses us my time is so such occupied that I have not an opportunit to write you in any other way. I presume you are good for this friedwer?

Villegian Bicomes -

08.8

I remember in the early part of 1870 when I was acting private sectotary to Mr. Rdison's agent in London that you were unxight to obtain a Vanity Pair portrait of Mr. Edison. We wrote the Mr. on Mast to see if we could get one for you but for some reason of another he would not take it out.

There is a young man here who has been quite successful in making a portrait of Mr. Missén, and he soems confident that he could produce gampting worthy of vanity Pair.

If you care to have a portrait now for your paper it will afford all our fired pleasure to do what I can to assist you.

I came out here about all months ago to set as Mr.

Rdison's private secretary. Since I loft London I understand that a young man who used to do short hand work for me same time before I left London, does work for you in the evening. I hope you find him perfectly satisfactory. His name is Lane, and he is undeutboodly a good short hand writer.

T. A. Edward Log
65 Fifth Avenue, New York

Dear Si

On the binstand I cabled you "This only three "Station until secupl my letter dutindays nead of following." European telephone agreements completed bable following. "Edizon Telephone Company of Europe Limited nominate "Yourand & E. H. Johnson as director sign Edizon "proident".

The reason why I asked you to ship only three stations until you should have received my letter you will easely conductance when I remaind you that, as they will have to be used chiefly if not exclusively in continies where we have no patent protection, it will be necessary to proceed with protection and after we have duly felt our way. And in the next place, as we can only hope to compete successfully with others, who may be in the field, by offering our Light at a less charge,

or at least on terms equally a wantageous as they leaving the public to prefer ours from its experiority. the outlay for all plant must be kept as low as possible - I would suggest therefore that , having , regard to the fact that there are no patents what I furnish all necessary capital, giving you half profits, you should supply the necessary plant of lost price to yourself - If you will kindly give this matter your careful consideration I feel sure you will come to the conclusion that the proposition is a fair one, when Thould be glad if you would cable me to that effect, & supply me with an amended list of prices - By that time. I hope able to send you a considerable order-Yours very truly per Illjigg towhisin the Letter was distaled by Colfen

er Sir:--

Referring to your letter dated "Outcohop, 1711." Mr. Edison requests me to state that
since writing to you he has been constantly engaged
on his electric light experiments. We is her occupied with the practical introduction of the light
in this city; upon the completion of which he may
'possibly 'find time to continue his inventions, and
no doubt the legaphone will come in for a fair
'What's of his attention.

Yours truly.

Secretary.

## REAL ESTATE OFFICE OF Tilch, Tor & Brown,

1437 PENNSYLVANIA AVENUE, (Corcoran Building.)

Washington, Q.C., November 1, 1881.

Dear Sir:

Enclosed herewith we send your tax bill for the year ending June 30th, 1882.

One-half of said Tax is due November 1, 1881, the other half May 1st, 1882.

Parties who pay the whole of said Tax within thirty days from the first day of November, will have a deduction of five (5) per cent. thereon.

On so much of the first half of said Tax due November 1st as shall not be paid during said month, a penalty of two (2) per cent. will be added on the first day of each succeeding month thereafter, until the same be paid or otherwise proceeded with as the law directs.

The law imposes a like penalty for non-payment of the second half, due May 1, 1882, if not paid within said month of May. We will attend to payment without charge, for our clients.

Please return bill with your remittance if you desire us to attend to payment.

Yours truly,

FITCH, FOX & BROWN.

London nov 6/81. My DE ar Edison This being Queday - and the Law as well as the British Work man being alike subservient to the day of the Church (ostewill) - Law in a measure at leisure - xwell huprove it by Cleaning up a few of the fragments of uncompleted conrespondence between es = Alean Dynamos The situation was not well progrosticated by any ofus Else I should have left myork 2 months Earlier - The wachine upon Which you worked night & Day x opent some hundred, of Etra more lies on the Dock yet awaiting the Completion of its final restring place Without the Knowledge I had of it however I should have made had mistakers sprobably such a selection of a dile as covered have had to be aboundoned Instable is therefore not whalf dissatisfied with the Delay-la fact he agrees that it has been all conducine to betterwork now V Consequently to Earlier Ances Our courasing the subject of Pelulity as not shown at Paris - I was able to Satisfy him that one of two things must be done dig: oblain definite assurance formthe European to that the Paris Dynamo

I would be delivered our within a certain time or order one form you - Iwas certain that you Would prefer the latter as it Meant an order for which Cash Would be paid - so I arged it on The ground of obtaining abspecies Machine - avoiding Complication with the European & reve. my readily took my views - heuse the Order - I cannot use it at crystal Talace as I am so weighted with The importance of showing absolute reliability in all my demonstrations that I must have 2 machines in My London Plant - and a munder at the Palace - My Order for 20 Small Dynamos - Was Hally given with a view of using them for Isolated Curiners - but the Sudden Cropping up of this English Exhibition Compelled we to provide for it frompe so I divert them to it - Expeciace as this Isolated business awalder give attention to - that we have postponed it entil after I get the present Exhibits in Cherating It is my foresent opinion that Radaon as I begin to thow What these Steam Dynamos Ca do - There will be a demand

for them for large Deolated plants Such as the lasse Railway fations - Big mills rere - I should have prices on them at an Early day : I have a plan which looks Very well for doing a very good believes with air grace was the plant now - Thave already in some demands on this basis. It is to use the many Enfineering Extablishments of the Country of The purpose of Sustalling these Outfile - They have all more or less experience in ouch work & Cay readily outse, the Electrical Engineer to receive instructions from me (Your dittle Book will help )-I will always send my own way to see the thing started after the have made the installation - 12 this means I deal only with the Engineering Firm - Delling them the Machines Hamps outright Our propils will probably nother so large - but that for a month or to is of less importance than of get our things into use - the give your shops Employment. I am about making abole in This way to the people from Whom I am getting my Crystal Palace Enjenes - They want 250 - 16 Candle Lamps with

Machines to run them - my lale will probably be 500 Lamps and 5 machines - as doon as it is determined I shall send you another order to 3 Dynamos as I shall require all I now have for work in hand to ax the Palace - 2 in my dondon Station 2 at Prieces Kensington dections and a few to share - Summer now order them only that I distill doing so until I have actuall made a Sale - not that Frabbie aloued not approve - but I feel it decreed not be quite busines like I have bargained ony 3 Crystal Palace Engines with Poly Ho- They loaning the Engines that paying all expenses of transit Operating re - a good deal = you have Ene this learned Souppose that the money was promptly for throwided for the payment for the machines ordered - That it was not done the rument the washing were ordered - was due salely of the fact that in did not occur to Either of us that you loved first want to see the Color of DNITC's money big you recognized the order - It is these little the Things which makes motiobhie

5 think you treat him enjustly as for Goverand - that is another matter - he cabled in his usual impetions way - then third to have off when the question of the mone thay was broached - that he flowed do so you might of course extern That the Other party could you Could hardly have a right to ouspech. for however much they may be disposed to by Cheop. they Cortainly Tray frompth for What they do buy = Lamps I believe I toth you about Our dicker with the Fraue Bat people - They will undoubted, They are delighted week our day so far - he shaw probably aus of sale in Other important avenues of sale - but are not yet clear as the Wisdom of selling broadcast or an Other words of pupplying offores. Concerns with Lamps then the Vetter enabling them to overtake as in' Other respects - I may have more & day on this head this a - Drmished dook out for him -Latiner Clarke - his Partner is the adviser of Gran - and So Yan as our latent investigation has gone we find that we

have more to gear from danctor than from shan - we have found a Patent of Love Fox's in 1878 ( 5) Which though fumbling about of so much as to not render his Peling valid of itself - he manager to make valid of usey we were Resister to in such way as were materials restrict us in the Broad Claim we purposed making on this feature. Infact it is going to the a very mice bit of work to clearly draw the die between your actual accomplishment and the "Publication" Effected to the man- I am having a copy of our findings an all important points dent byon to you may give us your views thereon - without the dator of unestigation of a mas of Striff - meantine if you Caned from thing I thing dead are a dix of guiding window it exacedher material - Onece . Dr Noplinson Shelford Didusee John Neury Johnson; Theodore Waterhouse & Muyself are the present Corps. of investigation - at a meeting on battering They resolved to Ftend the Roope of the investigation to all your patents and not Confine if & those on the Laush - at this Weller

1. The Subject of approaching Riemens on the question of Royally on the armotive was fully discussed - and Though habbre was decidedly disposed Though Habber was Opinion (as Conveyed to decept your Opinion (as Conveyed as the brief note found in my Books) as Guil antipolicient or to go to him at once - Hopkinson was Equal decided that we should find investigate Seemens Patent - Kedain no fight had Ever been made on the machine por the very much doubted if they carred Stand it at all events in view of The fact that Diemen haid a Engle. view of the Pacionott' publications ai Other Countries - v of the fact fires trought out here in a newshope - fast such Publication had been found have been made in England also . it Was finally decided to investigate - This opened up the question of a fue herestijation which was ordered - Hopkinson takes the Dynama as h. specialt - Bidwell the Lamps -Onece is making an Independent search of himself of the whale embject - WaterHouse. I I boss the fro - 4 point out the difference between you a What they find -John Kenny Johnson Tells as What the Law wice hold to be a Enflicient

difference Mohat it will not - for Wom Houson of fremen haid a long visit & your Big machine ai Paris - Thomson Said " Well Sin found & Jay its nothing but a Ocemen armature" - (so Hopkinson Day) - I told them I Saw nothing particularly Evillant in that find; Since in the Sense that Ke means I it the a diemens armothere no one ever Claimed that it wasn't although if the thing was through to possess sufficiently moved feature to render it quite as much different from Siemen as Siemens different from Gramme - Me win get deepen with this outject in a few days as This is only the inauguration of the unesticken I cannot of course ging In fact the whole Patent Examination is only now fairly organized -Nophiusons fee will probably be form 100 to 200 Guenear - Bidwell, is 7 gs here - Oneces ym know was 250 % - SAKON Materitomes will be heaving - be faction This whole thing well cost the drixel Morrord a round from Ene they get through with it - Trabbri is somuch Concerned for fear that his Partners will think he is enjudicional going it. that he to today sheeding some stones

I with friend Godfrey to explain water to him to the sud that he many acquaint thier fellow Portners how things fand I have however trough my intimon with godfrey ( rept if wer since wil left Myork - my wife Thending as weeks wing them in Poris) so fully posted him that he not only understands but Cordially approves & Endorses all We have done & are doing - This is so much more states factory because Godfrey from being sleptical as to our advanced position over our Competitions has been taught by the Paris Exhibition and my personal representations that ever alone have augthing of real value = They are also going to discuss any ocheme for "Eating their Cake " Keeping it to " = That is to day some Ocheme for introducing English blood Propital into it without parting " with the so is to love the great tropy of the future - Whatever is done - will be some low done on these his Miny framers - Safeguards ~ I am in receipt of your Gables & have written frion whom I know I know I want to a delie ato bit of work. Whas to be done in a Way that will not autiforings author - my letter is an invitation & there is a to examine into our system damps to

This whole question is coming up in the newspapers - by on may rel on it we shall take a hand in if When the time Comes - at present I am Keeping quiet . but Onesce has already dealt a back handed slap at a Times Correspondent on the question of Cool. Iwill keep up Our end in Other respects without showing his Head or ours = I profe to get my Plant going so I can and to any remarks I may make-"Come & See it" = Fatbri Insultetts me you are thing I am "off my base" on the matter offi proposition for Europe - Mudflam then so is downey for he distinctly tag We that there is nothing in Railey foresent proposition which is not also willeded ai Gabbies - Except that now Baileys is worked out in xespecx & details While Fathris was not to details owner worked out in the land in the hand in the handle way - and furthermore the habbins may - anager the responsible the responsible the responsible the state of Certain hayments Which in the Bail yroposition are only morning by Baily inhelalf of their - also that To proposed to hay on the shotty " - which could have put the 5 °co of det - , Groul speaks of las " Whereas his proposition and sono run.

"For Rending experimental planton & the Centiment re re: This of Course don't Concern me except so far as it naturally Comes to me and I are that trabbori feels that you are disposed to treat him with less Confidence than you hestow upon Bailey in whom high to tell you have no right to place any whatever - De the matter of Staly too he feels that you have broken a fromise made to him that he should have Italy on the day terms as could be obtained from any other parties - Indoor I gather from it are that Gather daines Some consideration for the guarante of good faith which his proposition bring . Which you refuse to accord. but make it simply a matter of Dollars Meut as between him xparties who give you no granate Elder in this names or in more Substantial stuff - Gardi errites from Tral that he Continues & have an Eye & your interests there although he is not to have a hand in the Matter - Kas been making some Platent researches ve - Of course gon will not take any of this as advice - you know your own business - Souly repeat is by because it has a leaving in The question of your hereaut

Klatins With amon who has their far impressed we with being a fair minded man Home disposed to help you while of Course he helps himself there of Convae he news are you Came of lame him for allaching something something something something something with the day considerate. since it was that dang consideration which first led gon to affiliate With their Nouse - rof tourse if it had influence with you it has with Others & is therefore a value able Comodity & deserving of ansideration in all transaction me Shall be in the result of the Eiglish regot at in the weight this Character of neen introduced into it. pied low far such an Eulespria siel Kow gar our by such abarrier at present it strikes me that m Frather Chief difficult is induce a Similar Class of people here & ally themselves with it. Johnson but he must put some other name Opposite the find - moth hay "If I could so convince So, m. of The Rolidit and worth of the thing no to obtain the use ophis "y name - I som floot the thing

13 at any price - and it is in order to So Convince him this Kind tax Que the work xpoesent schudiling is undertaken & assumed by hime this corner - of they asked hime asked asked asked asked weaken this position which is one of adsolute Confidence in the Value of the thing - Niew who talk - act in this way should centainly receive your hearty support. as well as your Confidence at least so I view the watter from my imperfect - because one fide source of information - When I see any sign of weakness or disposition to take under advantage you can Cetyper Book I Shall not heretal. to speak with Equal candon On the Other Side of the Jourse Telephone Ihave Insulls Enclosures in TE- to relephone matters with Imment aux shall have to required interview with the Duke at once - I have her so busy - and the Dake has been so Kept at a Distance in this matter of E. L. (as dusues wie Explains that I have had no opportunity to talk to him on the Bubyect . The has homen put we into a big Co- as direction (Temporosil) - without my Knowing

neuch about it - and I am to have an interview at liesure -to discuss the dilitation with him -I will then inject the one mate of a settlement with you - and be able to write you of truething definite - In my Opinion he has Hown done pretty big Bussles hear How down from he cometted he bloth your Coal this - Except as to his financial Coats - He wis tato car of that . He is giving the impression that he is retiring from action lusines and it is not unlikely he is timing it Complete withdrawal to suit the Jing Tumble - How so many Millions Candi invested to business done is more Than I can temprelend - you see if We were to take him into this E. L. x such a crash should come in The relephone - The Effect on the Eg would be dis as hous - So he wice he left out - will not be in any Way Interested Other than asym have already fires to him - He Wang horganiz a dig G. on your donking Concessions - in fact he has the want Capital on Wants me to go in on Equal terms with him - but I simply asked him for a showing of how my Interests Stand ai the Colonial Telephone Co: Yours as Ever ENAhuson

## THE EDISON ELECTRIC LIGHT SYSTEM.

EDW? H. JOHNSON,

57. Holborn Viaduct,

My Dr Edison I was more than suspringed today by the receipt of your Cable of Greeness wants to buy a back of my interest in the English dight tall & him" re I don't off king riply to the Effect the it wouldn't do = my letters which their the will shorth reach you - or or or paragraphs in mine to Insue Mill gove you are ensigh with my reasons to being so emphatic onthis head - the fact is the father? has found on uncelleten that if he wants to bring who this thing The Character of men he has been contemplating he west not have 4. E. G. and has been very decided informed by Eminent donder aut - in no way connected with 4. E.G. or relephone watters - that 4 Ely is not the oosh of man that good men will associate with in Curing - mr. Id me that the testimony On this head was so Conclusive That he should if it became necessary, not heritate to tell The Duke the fact to his face bailing then to get into it the This source he tries a Coup through you - but fortunately Tome - HE told me he was going to Paris lack night of

2

57. Holborn Viaduct. Thought he had Jondon Exect a feet midules after Strent off my Ball I had a case fru him - He asked Me It I had had a cable from so advised him so I "Cauldn't tell alie' x aus "yes . I asked him what it meant - he attempted a bance, I planation to the Effect that it pish Occurred to him last night that as he was desirous of increasing his E. L. interest + that you were wanting money that possibly you might be Willing & Let - he treated the matter Very Carelessly - as though it was of no importance - In fach as any one Whose Coup had been foiled took Whose coup was to belittle it - land the many I asked him What offer he was I don't know that I am prepared make any - but If Edison will dole a quarter or less of his interest Will make me an offer of wice see if I can offord to being it - cothere you are the asked me to so inform you - I agreed to do to. but it the Dancetine told him that I thought it against your interests as were as ours that you should part with any of your holding first at

into it through the Dur Guterest

EDW? H. JOHNSON,

57. Holborn Viaduct.

Then immediately wrote to mor frote; telling him the whole stry and washing him against the duke machinations - now my Star Old Man - Skuowym Want money -+ of you have any intention of left, augotymer interest let metaris The fack and I will find you a burcheser very quickly who will pay quite as weech as goverand and whose money wice not operate to prevent your obtaining more Holdings - newerber this - always Mousing forgues and I for the general good I think you aught not to see at all - by you can Carry operacly over intil about handsome remittance The Duke said in reply to are those Communications Gonnigon in 72 to telephone althoughts - that he Could not understand them - The If all the work of maill - I told the him no , I could hear testimony to the fact that the vicer therein were your own - x recalled to his nied That when I was in England I assised him to Rettle this thing With you. He Evades the issue right along - Days I don't want to Rob him neither do I want him to rob me" - I gave him to understand 4

EDW? H. JOHNSON,

57. Holborn Viaduct.

that you would not swerre The prairie you have taken in The to the question of who should key for formity companies agriduales to x profited by your experience in the Allephone to have a clause in you Im to Contract expressly defining this frinciple = He then informed my that the Oriental auxiness had first been closed & they were now ready to pay over the cash - having so decided gha stormer neeting on the very day of our Conversation . He also toes he that he had cabled you the Money for the 20 synamos & Sent you Tooos of Cash on the general of . This looks magnanimous - but bean in need that beside what he own Une on Pelephone actilement % the was just fort in possession by The action of this Oriental concerns of more than orifficient Cash, of yours to tover these apparents liberal advances - the told me that the 80,000 was paid you an general of. That is to day he expressly wife the settlement question - so you are Ottle in the fame position you - although it looks as if he had Hesponded to your appeals by acuding you money in them -

Elec Raie Roas Philadelphia Nov. 23. 1881. my dear Edison:-Thanks for your litegram of the 12th and your letter of the 2120. I did not reply by telegraph to the question you asked in the letter because & could not recollect at once the cir. cumplances, Even now do not recall clearly that any execial form of apparatus was lathed of. Premember very well that we talked during that effe-

delion upon electricity as a motive power and upon prorelling) railroad care by, it. We discussed logether, as & reall it, the machines in we as electric generators and the economy of their reversal Do as to develope power, I had had a Gramme machine in use lince 1845 and gave it always the preference over the isement machine This is my recollection of what pass. ed between us but Dam afraid it is too general to be of any covice to you. I am much obliged to you also for the things you sent over to me. I made use of them as you can in the paper

& Rent, before the academy to correct and neutralize the impression given a year ago in favor of the maxim lampe, Everybody was very much pleased and July Convenced that you were a long way, ahead of every. body else. By the way, did you notice in hature for hov. 3, page 16, at bottom of the page, a very complimentary allusion to your eystem of lighting," write now to lay that Defect to come over to new look on Friday, morning in the 7"35 tram; and that I will come at once up to 65 Fifth avenue to see you. I shall reach there about

half past one and suppose. there are lots of matters & I want to lath over with you and we can arrange for an hour to chat quietty together. I shall probably remain titl Imday night, possibly untit monday, night. I have an appointment at Drepel 1000 about one on Friday, mr. Habber wanted me to go in and see Mr. Wright about the London outlook, which is fine, & Raw Imr. a . Jarrelel here this afternoon and he a very, much interested in the success of the Leondon Company. "
Hoping to see you on Thiday I am Cordially your A

6, Lembard Shart.z.c. London December 13.1881

Mry dear Insull

Jam very much obliged to you for your letter of 30th October, which arrived during my absence in Italy, and which Irmust say were it not third I knew My Colison as well as I do, might have given be a little inneasines. Inobably, the signs of midation when you spoke to him were owing to the great pressure in financial matters which, I imidentand he has lately been under, and which, so worn as I learned, I ondewound to remove as for as I was concerned by a remittance.

You must be in error the a to my dight agreement never having been argued by Mr. Edison, a I have the original in my box at the New Mork Safe Deposit Company, and it was only to oave broutling my friends to get at this that I askedyou to to good enough to send me a copy. I wall probability the reason you thought that the agreement had never been signed was owing to the copy in Mr. Edison's house Office not having been accounted. This I am quite aware of, as I did not sign Mr.

6, Lembard Street, z.c.

Edison's copy. But even if ouch were not the care and there were no written agreement between us it would not be the first time, as you very well know, that Mr Edison & I would have had important brans actions together without any documentary widence of our relations, and I should have no doubt that Mr Edison would act as strictly in accordance with his high sense of honor, and with his usual straightforwardness in this instead with his word that are past. At the same time I am very much obliged to you for your letter, and for so kindly looking after my interest.

Things are putty bish here just more thought of cannot exactly vay that I have any matters advanced beyond a state of embryo, other than what I have already reported to Mr. Edison I have just returned from a visit to the pumps attice in Italy where I have been to look after our literphone interests in that country

The agent Ireferred to as having been sent to Portugal has just cabled me saying, that he has ensected in obtaining a correction on very favourable terms - We shall have to work this within a mouth so that I shall have to obtain premise, and send out instruments and men forthwith I also mentioned that I had an agent in Russia - Well he has returned and I am now in the midst of negociations with certain Russian gentlemen for the formation of a Company for that Country, that will combine all interests and have an almost each wine concession for Expense Of tverything goes on satisfactorily this ought to be one of the most successful telephone schemes yet set affoat:

The ariental Shareholders' meeting has not been yet called as there was some little delay in getting the agreement for release approved by all parties, owing to the Angle Indian people making some difficulty as to the 4000 Gover Bell Telephones - I think however, they will now make

nº 4)

6, Lombard Street. z.c. Lindon 18

no further objection and that we shall soon receive notices for the public meeting as regards the Elective Light I fear I can give you little news, as you will have been well parted in everything in this connection, may say however, that I think we are steadily gaining Enground and that all our rivals, with the exception of the Brush appear to be doing next to nothing. The very sucressful result of the light on the trial trip of the Brighton Pullman train created a good impression, and I confidently expect that when the Crystal Palace Exhibition is opened we shall come before the public with such éclas as to carry all before us. This Edubition will not be opened quite so soon as sexpected, but this is awing to the wish of the Council to prove an exception to the rule generally followed in opening Exhibitions, and have everything complete on the first days Tusting you are well

Believe me, your verytuly,

Jean Septiers | George of Conference of Learner of Conference of Learner of Conference of Conference

17 h december 1881.

My dear Edison,

Farre accumulator.

The enclosed copy of a letter just received from Major Ricards - beaver will interest you because of what he cause of Mr. Bross . In conflor he told me that he had heard compthing derogation to M. Bross, and I rejected him to pursue his reprincipand let me those the result. The reference to behange arises out of a request by me that he would devolute the behange pretence of a publication. In respect to Holland, him I to day to him that Gomedud has that business?

Saportas.

I have seen baptas fince this morning.

It came to deliver me the shares of temopehn

Stock sold by hiskers. I have also to letter from

Porges this morning poneching his former letter

which stated the shares as \$1000 ollars, and led

me therefore to enthose that they were to driven.

Cleatic Light both panys shares. This gave me

the occasion to speak with M. I and I simple give

spen therealt. You need not answer, the lettel of

M. Jownsend. In the meantime, when son meet Sapontons please do it in a friendly manner, though for Phat matter I suppose son habe always done so. You will not, I think, hearlampthing further from this on the subject.

I also met Villand at hunch and spoke about som expenses on the Railway. I think, if you deane, I can get som these expenses throm highly though he says not in the shape of payment of bills which he has not agreed to pay, I think herhops I can get it in the blage of and advance - only showed to have to give him some vonches for it. I'm necessary to be strict in hummers want these people; and he tills me he is quite willing to help out with these expenses, only he wants it done in a some to way.

THE EDISON ELECTRIC LIGHT SYSTE

Thomas A. Edison Esq.

65. Fifth avenue, new York.

My dear Edison,

I accepted an invitation from Coll Gourand on Wednesday night to attend a Soirce given by the United Telephone Company to the press at the Bristol Hotel, the Object being to repeat the Paris music transmissions on This occasion the music was transmitted from the Opera Comique to the Bristol Stotel. It was of-course all very interesting except to those like myself who knew out could pick out weak points - in fact the arrangement was very ineffective and not at all what it could be readily made. It was under the charge of that ots woman Morgan. But this is not the object of my letter so don't be alarmed. I selegraphed you that I would obtain the information you wanted on Christmas Day. Here in London both Garnaus and myself are altogether too busy to get together a sufficient length of time to exchange views on Telephone matters or Electric Light prospects. Me Gourand having extended an invitation to Mrs Johnson and myself to come down down and spend Christmas with them I decepted in order to avail myself of the opportunity of having a full and free discussion with him on all there

matters that I may understand them and advise you. This Telephone experiment however, gave me the opportunity very unexpectedly of not only a full talk with him but I also had a 2 hours talk with John Render. I think I now understand the Telephone and Electric Light-muddle pretty well. at all events I will endeavour to give you my imperstanding now and if after my Crishmas visit I am able top throw any additional light on it I will write again. Letus take these things up in the order in which they some into existence. First; The Edison Telephone Cy. - Passed out of existence under the Consolidation Programme; division of profits derived from such consolidation as between Edison and the Company thrown into the Courts by Gourand and being settled by the Courts in The usual tardy manner; a preliminary settlement made some time since in which the gross bulk of interest was passed over for division. That division was made and in it certain shares were parter to your account and subsequently sold by Gourand at a figure a hifle more than one half of they present-value of those shares. On my arrival in London I found that there was before account in dispute and with that audited a final settlement of this Company's affairs could be had. It was as to whether a certain instalment of inchuments from Dergmann were the property of the Edison Coy'or the property of Bergmann on the day on which the amalgamation took place they having just-arrives

3. at the Dock. The miled Company look the ground that they were the property of the Edison Company masunch as in the contract with Bergmann it eyes Stipulated that Edison himself should approve the work for the Edison Co and that such approval having once been given the instruments became the property of the Edison Cy. The Edison Cy took the ground that Edisoris approval was simply a prelimmary matter and that Johnson's approval in London was necessary before they became the property of the Edism Cy. I endorses this view and explaines that the mely object of your supervision was that the instruments should be made in accordance with your ideas as too resistance of induction coil, general arrangement of the several parts and so on, and explained further that you desired to have this supervisions because of the fact that other manufactures in the United States sought to "improve" your instrument to such an extent that they improves it- out of existence and that you has revolved that this should not be the ease with the instruments made for the Edison Cy by Bergmann hat that this was simply a preliminary examination nut that you yourself insisted that I in London should pass upon the workenouship finally before the instruments were accepted by the Edisonly. I have brought privare proof that this was the understanding and in that the Edison Co obtain The

the price of the instruments from the Neited Cy which amounts to £ 1500. Since this was done notice has been served on the Edison by that a final settlement- may now be had. It want there are 1200 shares to divide, 600 of these of course go to you They are selling in the market here now at £ 12 per share, therefore, there is a sum of £ 4.200 for division between you and Gourand. I hilo advice you immediately on receipt of these shares by Gourand so that you may call upon him for your money as I certainly shall for my 5 per cent Thus endeth the last Chapter of the Edism Conjuny. Consolidated Velephone & Construction for Smites - The Company was organises by Gourano and reveral other parties as a manufacturing concern. It was afterwards weed as a medium for absorbing. They Yower Rell cutorprise. It has a large capital and appears to have plenty of money and has been doing all sorts of shings. I as first thought that it was a skin affair in which the public were to be inveighled my to be afterwards fleezed but I find that it has deceeded in obtaining certain very valuable Contracts one of which is the monopoly of supplying all the Telephones required by the · Muiter Company of England". It has other Contracts of almost equal value; its stock stands pretty well and in factilies on a very good hadis altogether but you have no interest in this Company except a possible few shares which

Gourand says he bought for you aux afterwards hold at a profit. Whether or not They have been accounted for to you of course I know not Oriental Telephone of - ( John Tenser, Chairman) This concern was organises originally for the purpose of working a few of the lolonies. They succeeded in getting the thing into pretty good Shape when yower came over here and upset it by her dicker with the Government. Tender refused to go on whees your was got out of the way. Au attempt was made to absorb him by the Oriental Company but it failed. Gourant then uses his Consolidates Construction. Company for the purpose and accomplished it by that means. The Oriental Co was then put on its feet again and has been ever since quarrelling over petty details the last of which was the rebate which should be made by Gowans and his party on account of the failure to deliver over China and I think Australia, or at least the failure to deliver them unencumbered. The original terms were as follows . - Briental & to pay £50000 in each and £ 100,000 in stock to the triparty parties to the Contract in these proportions .-1/4th to the Anglo- Indian Gower Bell concern 2/5th to Hubbard and his parties and 2/5th to Editor. I concession was finally made

and only made within the part 3 or 4 weeks after a very hot debate which came well night dissolving the whole concern. The ultimate outcome was shat \$ 10,000 in each was thrown off and £ 25,000 in stock; thus the payment to be made within a few days is now \$40,000 in each and of 75.000 in stock. Out of the you get 2/5th or 40 per cent both of the east and of the stock. The stock however, is a Deferred stock and can only cam dividends after the Preferred Stock has carried 5 per cent for 5 concentive years or an aggregates amount equal to that in a less time. There shares, however, I am assured by Gomant will have a considerable market value and the Vreferred shares are now at a considerable premium. The Cash division will not be made in full immediately as there is a provision that out of this £ 40.000 the several Vendors me to receive back their expenses. No lived, however, was made to what show experies should be; consequently that righteous old man Hubbard has put in a claim of \$ 10,000; the Augho- Indian has but in a claim of £ 2.000; Gourans very streewoly refued to put in his claim until he sees what the they ware but he simply guarantees that it showed not De in excess of mostubbands. He consently know Hubbard. Now these Vendors will not after to allow Hubbars & 10.000; the remelies that an

I Arbitration is to be called and the accounts passes upon. This will probably entail along fight over the spoils but Gourant has so arranged matters that the amount in excess of these claims shall be immediately divided Consequently we have yourands claim for \$ 10,000, Hubbards claim for £ 10,000 and the Auglo ludian claim for £ 2000 locked up in the Treasury to be fought over leaving £ 18000 of actual each to be immediately divided. 40 per cent of that sum is £ 4.200 for division between you and Gourand. The Stock, of course, is not affected by these claims and may be at mee divided. Now right here comes a third claim, namely, your humble screaut. You will remember that this is the affair in which Coll-Gourand promises me a 5 per cent interest in return for my good offices in seewing him these Colonies from you and that on my return to exurina I represented to you this fact and asked you if you were content with the promise made by him insofar as you were concerned. You said it was all right; therefore on my visit here last March I reminded Gourand of his promise and asker him how the water stood. He had by that time projetten all about it but declined to look up the papers which I told him he would find in his office magnanimously preferring to take my recollection

of the matter rather than go to the trouble of looking up the papers. I have again caller his attention top this promise and asked him where I stood. He recalls the conversation of last march and tells me I stoud just there; he agrees to take my recollection and to pay me accordingly. He asked me if you were satisfied and I told him I had had us convertation with you since on the tubject but that at the earlier date that I have rejured to, you had given your accent and that I therefore concluded that you were entirely satisfied but that in order that he might know it I would get The acknowledgment from your own hant. Will you Kindly send this to him. I had a long talk with Render about this Criental affair and he tells me it has the smallest-capitalization of any Telephone Company yet organises on this side of the water, namely £100.000 and that its business is likely to be very great. They have already species Exchanges in Singspore, Bombay, Calentha, Raugoon and other places and he ( Pender) is now about to leave on a visit to Egypt and is going to Extablish while there Telephone Exchanges in Cairo and externaction and is also going to connect those two places - 200 miles distant - by Telephone. He is very Sauguine that criental shares will very shortly command a high premium. I have also this information from an entury different source

que ain looking over the yours I am not turn but what they would be a very good thing to hold. I should therefore advise you to hold on to your Deferred shares. In the adjustment of this Oriental matter Gourand managed to have thubbard and the Auglo. Ludian join him in paying off your old automatic Telegraph indebteduess to Sender. How he did this I do not know but that he did it is a fact. He will of course expect that . you will join him in paying the Edism proporting of this sum - I thruk it was £ 1.000. My recollection of the manner in which this thing was brought about is this that all hands were exceedingly auxious to get Bender into the Oriental Telephone Enterprise and that appear, stipulated with Gonaus that if he came in it would only be upon the basis of his obtaining a settlement of his old automatic claim. Therefore the restlement of this claim became a bonus pair by yourand, Hubbard and your to Pender to seems his co-operation and in my judgment you have no more to do with that bound than you have with the bound paid to moore for inducing him to organise the Glasgow Company. your refueal to have to do with it will work no injustice to your and for the swiple reason that he has been able by beason of his connection with you to make other Selephone investments such as the Construction Company in which you were not interested

for from which he derived immense profit. He has therefore, made more money out of the Telephone than you have and since the spirit of his agreement with you is an equal division of profits it follows that while the letter of his contract with you may have been lived up to the spirit-of it has been evaded. I think you can put this in a way that will effectually stop him from making any further demands on you for assistance in organising his Companies.

Edison Gower Bell Telephone Of of Europe. This is are organization effected by a combination with Puskas & Bailey, yower Bell & Edison. In attangs has been made to induce Stubbard to throw in his interests but no towns satisfactory to the other parties could be had with him. Then result is that the E.G. B C is independent of Hubbard but in some way or other the Edison got a footing in Ruckia and Hubbard on alterepting to do something then found himself check makes at all points. This resulted in a compromise which has just been effected so that the Elf. B C of Europe now includes Hubbard in Russia. As there has been no work done by anybody in Russia with the Telephone that country is unique in this respect that the "Telephone interests start There

from the foundation at the owner of all the Telephone Patents there are. Considerable is expected of a Company starting much such glavorable conditions as to monopoly. The Elg. B. Cey was organised on the basis of shares simply so that when organized it was without capital to go on. In order to obtain this capital a dicker has made with the Consolidated Construction fo which Company paid in to the Treasury of the El. B Co the sum of £ 25,000 the consideration for which has slipped my mind & 15000 of this money is to be paid in each and user by the C.J. Bla Jor operating expenses; £ 10,000 is to be paid in instruments. Just-what the Edison Sharo in this Ed. B Cy is I do not now remember nor how it is to be divided between you yourand and Taskas & Bailey. These missing links in the chain I will indeavourismy to supply to my wental storehouse on my Christmas visit and will contribute them in another letter later ou.

More if you will make up a sort of generalises statement of the amounts of money and thook that you have received four your and measured of these various Enterprises and sous it to me I will have it checked either by him or by his clerk and a balance drawn in each call approximates

where actual balances cannot be obtained and return to you showing you the exact accounts of both cash and stock that are yet coming to you and also on what basis the Companies are formed, what probability there will be of a market for the stock; what the present price is and so on. If you will there direct there things to be placed in my hands for disposal I will see that you realise the full value on Everything and that you get the money by cable the moment the transaction is made. I will also supply Batchelor with all the facts in the case and consult with him whenever I think the time has arrives for doing anything and jointly I think we ought to pull up some chestructs out-of the fire for you without any very great trouble or delay Electric Light. Yourand tolo Fabbri on the our arrival that he held himself entirely at his ("Tabbris) disposal in the weather of the English light, that he would either go on or that he would stay out just as M. Fabbri might elect. I saw the wiley Charact

of this innecent proposal and told. Fabbri that

before accomplishing anything he would filed that Gourand was pulling the wires in all directions to get the control. This afterwards developed to be the fact. He not only attempted to purchase a portion of your interest but he also tries his hand on Lowry and on Fabbi and subrequently tried his hard at purchasing the whole thing, but of this Fabbic will tell you all. Failing therefore in obtaining control for England he turned his attention to the Colonies and finding that Fabbic controlled either for himself and you jointly or for his brother and others, certain countries, ramely Korway, Sweden, Vortugal, australia and India he made a proposehim looking to the purchase for these Countries. This proposition by Fabbin has sent you in the final form in which it was put yourand at Liverpool on the day "Tabbri Sailed. You will therefore get this better from his hands than from wine. The parties with whom you and is dealing I do not know; he would not give me their names but tols me that they were a party who has control of the Weston Maxim are the fortin lights are that they were willing to way \$35.000 for the Edison for there Countries. He says that he told them

that not me plany less than \$50,000 would buy them and he tells me that he is confident that he can get this £ 50,000. Thus outher of 1/30 top houself he makes a niew little speculations I can hardly advise in this watter for the reason that I do not know all the interest that are involved but \$50,000 as a down. right purchase outright for all these Countries seems to me a very meaninterable Seem. It is true that Morway, Sweden are Portugal are not of which value, and further that Lucia, it is east, prefer gas or louce other form of light, as they required is little warmsh shot they relied on the heat thus obtained while if they was Electric Light They would have to heat in other ways. Whether this is a mere specious argument or not ! are weather to day but chestralia alone ought to be worth that amount of money. However, you may judge of this for yourself. I asked Render how he stood in Electric Light waters and learner from him that fe was interested only in the there, of a loup any called The lastern Electric - Light Company which controlled the Laure For and the Brush Saturds. He has the controlling witerest of his Company and has named the Board and Chairman; he does not appear in it himself but his Am does. He telle me that he was interested in the Electric Light-and Power Generator Company for Eugland but that he got out of it and that he has no interest now whatever in any English Concern. Governo stepped into the Conversation and banteres him on the purchase of the Edison Patents for his Eastern Company. He very positively declined to Entertain such a proposition and even declined to sell his shares in the Castern & area go in with Gourans for a new deal, on the basis of the Edione Patents but in a walk house at 3, A.M. with the Duke of horwood he very gleefully informed me that the little Conversation that he has has would in a few days result in Renders making him overheres looking to the purchase of the Edison Patents. Whether this is a songuine Niew or whether the Duke understands the great ex Ruder better than I think he does will develop later - m Fabbic failed to tall me in his letter from Queenstown, exactly

tokal understanding he did have with Gourand in respect to there countries and therefore I am only in possession of the facts through yourand himself. I Care therefore do nothing in the make, of norway and Sweden as mortablic wished must I learn from him himself or from you what (if any) arrangement was much with the Duke. If you will bear in wind that all this is suighly the recollection of one night and that they were gleaned in the small hours of the morning after an orgie, I think you will consende that I Kept recoverely sober. at all events you have got everigh here to write ine a letter on and give me your further instructions. I told yourand frankly that my object in leaving all the facts from him concerning these things was to put you straight and that you had said on one or two occasions that you only understood weather when they were eigher through my hands. He expresses a desire to pacitately so worthy an undertaking and told me that if I did not comprehend fully everythis to come to him freely and he would? give we all the facts. You do not oppear

you have nominees - Gomes in her you have nominees - Gomes in her winter and by Bailey as your nominee on their behalf. It'd is in the CG, Bly. I have not attended any meetings of the reason explained to Gomes that I would not go to a meeting as a Duestor of a Company will I medicated something of its fast, it is a companied bether now and will title better after Christman I that attend the next meeting and her would the boys do.

## 1881. Edison, T.A. - Accounts (D-81-005)

This folder contains Edward H. Johnson's account with Edison for the period 1875-1884, several accounts between Edison and George E. Gouraud concerning the telephone in the United Kingdom, and a list of promissory notes and their due dates.

Most of the other documents are trial balances and draft account sheets that were used in entering information into journals and ledgers (see Accounts Series). These have not been filmed. Less than one percent of the documents have been filmed.

### 1881. Edison, T.A. - Advice (D-81-006)

This folder contains unsolicited correspondence suggesting improvements in Edison's inventions, asking him for advice on technical matters, or requesting his assistance in improving or promoting an invention.

Approximately 10 percent of the documents have been filmed. Most of the documents selected for filming received a significant response by Edison.

Durbury Mass Dear Si, Since Receiving the Lelephone four to Kindly Lend me I have treed oumerous superin with is both on the cable & artificial cable used in the duple but am sorry to say so far without lucies. I am confide that the bromble is caused the polarization of the chalk & palladium for on inserting very delicate galvanometer (when as perimenting on short circuit in the circuit; on breating contact a slight current is observed in the offseite direction to the original one of water that has subsided &

x batty et Ep about 40 volts Late and \$ for 1/2 sec or 1/2/ trument will not return to foro. I have made instruments in different forms & can get nothing at all reliable. The telephone when on the cable with 500.000 ohmo resistance added & a condense of 325-onic foral will answer to Every reversal, but not when dots or daches are sent succession wely without reversals, or when more is sent with a double batty on the Key, as the back batty on Key is not on long mough to clear out the cable from No previous charge. of the slightest current is sufficient to hold over the diaphragmo, can do nothing with an induction coil on the cable as the wave is too slow to form an induced current in the secondary, which is proved by putting a bell telephone

in circuit with the recorder, the signals are perfect on recorder but silenes in the telephone, but by putting in an interrupter in circuit the telephono can be heard all over the office - The inchiment (telephone) is Exceedingly Sensitive & if it can be made to work without "Sticking" I think it would be by far the most delicate relay get found. & just the one for cable worth, it. acts so for just as a chemical telegraph would (which it is in reality viz the tailing would make the signals run into one another . Any other Experiment you would like one to try of should be happy to do for you if you will let me Know of it . I don't give it up yet by any means as I am sure there is something to be enade out of it either as

recorder or a relay, The difficulty principally is to make it break contact with a pall of potentials Egnal to about one with of the potential that made the contact. at present as long as one hundredth of the maximum potential remains as the cable it represes to break contact. a condense of 11.6 mic for charged with one cell of 2 volts Bonts will when connected to the two poles Keep the two points closed Sometimes for one & half minutes. if the chalk is not very damp. Stoping to hear from you at your Convenience Jan J. a. Edison Sight Charlettries. Menls Part.

40,002

. 65, 5th Ave.,

Hew York, Feb. 23d, ISSI.

Charles Cultriss, Esq., Dear Sir;

Your very friendly and pains-taking experiments pleased ne very much indeed. I am quite sure you will yet prove what we think possible. The thing can be done; let us do it. Yery truly yours,

Thos. A. Edison

Is there anything else you want?

Leadoin march 2 a 1880 merryat bily I wish to submit to your constitution and have I'm give us I'm afinin upon a Thomp that is queedly conviction a fund as a general rule denumce it to You think there is any mine of mille on plaint that is attended by Land delver or gold, we are proofeding how with drills, about one year ago www. pursuredest to dend for an old man in Balifornia who possessed an instrumb that Pointers to the bodies selve Level and gold the come him with in little warren motor about two inshes long and half such in Thickmen's which centim some heary flind an this he freson two very being while bones som 12 insher in longthe lace

Dear Sii: I am about to issue a little work on the "Mechanical Helps to Hear", describing the rarious appliances used to aid defective hearing. I mention the possibility of science offering something to us much to be desired. In this connection, I have heard that you had divoted some attention in this direction. I take the liberty to ask for information on this point, loan you direct me to any source which will give me any such information? In your opinion is it a possibility and likewise a porbability, that any of the primaples of the Velephone, or other secut appliances in acousties, will ever have a practical offlication to aid defective hearing? I recutly made the following Cliffing I from a scientific Sound. Is it a trutte " Prof. Bell rather startled the Royal Institution in Indon

OFFICE OF

THE RAILWAY AGE,

Grand Pacific Hotel Building

Thos. a. Edison Menlo Fark M.J.

DEAR SIR: By to-day's mail we send you a copy of "The Railway
Age," containing an illustration and brief description of your patent
"Olectro magnetic brak

These will also appear in our magazine, a copy of which will be sent you, the two publications giving them a circulation of over ten thousand among the railway men of this country and Canada.

This we do without cost to you, but at considerable expense to us. If you would like the electrotype plate for your own use, in printing eignulars, anvelopes, letter-heads, etc., we will must it to you on receipt of \$\( \)\_{\text{or if you will aubscribe for the weekly "Railway 4ge" at our regular price (\$4.00), we will furnish the electrotype free of charge; or if you subscribe for the Magazine (price \$2.00), we will furnish that and the electrotype for \$\( \)

This will not cover cost to us, but we make the proposition thus liberal so that you cannot fail to see it to your interest to accept.

Your attention is also called to the enclosed printed slip with reference to the exhibition rooms maintained in connection with "The listings dige." It will cortainly be to your interest to be represented in these rooms by a card model of your invention. They are the resert of railway men from every part of the country, who came to Ohicago.

We herewith enclose blank order and addressed envelope for your convenience, and hope to hear from you.

Very truly yours,

THE RAILWAY AGE, E. H. TALBOTT, Prest and M'gr.

5th Debr 81. Dear Sir I am about to publish an Suglish translation of Hospitaliers book " Les principales applications de l'Electricité" I donnes Ruro whether you know the book, but it you do you will quite un dero hand that it is impossible to give an impartial account of your moculion of discourses in the lateral translation of a book which takes such a prejudiced to one -Lides view of the work of on of the most prominent proncers of Electrical

#### ARTICLE III.

MEMBERSHIP. SECTION 1. Any person desiring to aid in attaining the objects of this Society shall be eligible for mem-bership.

SEC. 2. There shall be two classes of a active and honorary.

#### ARTICLE IV.

### OFFICERS, Szc. 1. The officers of this Society shall be a President, six Vice-Presidents, a Secretary and a

Treasurer. SEC. 2. There shall be an Executive Committee,

consisting of the President, the First Vice-President, the Secretary and four members. Sec. 3. A Librarian may be appointed by the Executive Committee.

#### ARTICLE V.

AMENDMENTS. Amendments to the Constitution or By-Laws shall he presented to the Executive Committee, who shall be presented to the Executive Committee, who shall consider them and report, with any recommenda-tions, at the second casaling meeting of the Society, and it shall require a two-thirds vote at the next ensuing meeting for their adoption.

### BY-LAWS.

#### ARTICLE I.

MERTINGS SECTION I. The regular meetings of this Society shall be held on the first and third Thursdays of

- SEC. 2. The order of business shall be:
  - Rending of the record of the previous menting and action thereon.
- Proposals for membership.
   Balleting for candidates.
- Reports of committees,
   Unfinished business.
- 6. Reception of con 7. New business.
- SEC. S. The Executive Committee may call special meetings of the Society at their discretion, at which
- none other than special business shall be considered.
  SEC. 4. Fifteen (15) members shall constitute a quorum.

#### · ARTICLE II.

MEMBERSHIP.
SEC. 1. Candidates for membership may be proposed at any regular meeting and balloted for at the next, and shall be declared elected upon receiving a majority of the votes cust, but may be elected by a unanimous vote of the meeting at which they are proposed.

are proposed.

SEC. 2. Honorary members may be proposed at any regular meeting, and shall be declared elected upon receiving a usualmous voto.

SEC. 3. The initiation fee shall be one dollar (\$1).

SEC. 3. The initiation fee shall be one deliar (\$1), payable on the date of election, and the dates shall be three deliars (\$3) per year, payable quarterly, in advance.

SEC. 4. Honorary members shall be exempt from all fees and dues and be cutitled to all the privileges of membership except voting.

of membership except voting.

Suc. 5. Any member falling to pay dues within

two months of the date on which they fall due sind.

two months of the date on which they fall due sind.

be decaded in bad standing and have no voice in the

nflairs of the Society, and be so notified by the

Societyr, and shall forfell membership, if dues are

not paid, at the expiration of the third month, unless

the Society orders otherwise.

#### ARTICLE III.

The election of officers and members of the Executive Committee shall be by inflot, and they shall serve for one year from the first Wednessky of March, or until their successors are chosen and qualified.

### 7. ARTIOLE IV.

SEC. 1. The Predicat, and, in his absence, the Vice Predicate, in regular succession, shall preside at all meetings, and, in ease of their absence, a Chairman pro tens. shall be appointed.

at all meetings, and, in case of their absence, a Chairman pre text, shall be appointed. Sex, 2. The Scoretary shall have charge of all the control of the control of the soliday. Sex, and the Sex, of the control of the soliday of the funds of the Sciety and shall my charge of the funds of the Sciety and shall my charge of the funds of the Sciety and shall my charge of the control of the Sciety and shall my charge of the control of the Sciety and shall my charge of the control of the Sciety and shall my charge of the mittee. He shall furnish such bonds as the Excentive Committee may require.

Sec. 4. The Executive Committee shall have general charge of the affairs of the Society. Sec. 6. The duties of the Librarian shall be prescribed by the Executive Committee.

#### ARTICLE V.

DONATIONS—THOUSETT—EXPENSE.

SEE, 1. The Secretary shall record all donations to the Secretary shall record all donations to the Secretary with the summany or articles of values, together with the number of the Secretary with the summany of the Secretary shall be removed from its rooms, except under such rules and regulations as the Executive Committee shall precise.

Sec. 3. No expense shall, be incurred for the Society unless approved by three-fourths of the members present at a meeting, and no bills shall be paid unless certified to by the person untorized to contract the debt and audited by the Executive Com-mittee. mittee.

#### ARTICLE VI.

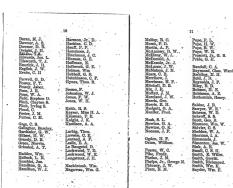

MISCELLANKOUS.

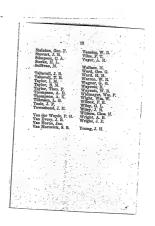

Size, 1. The regular order of limitiess may be sus-pended upon a majority of the members present at a meeting voting in the affirmative. Size, 2. Accredited proxist will be accepted in the election of officers and in voting on amendments to

ofection of officers and in volting on amendments to the Constitution of By-Laws.

SEO. 3. Unless otherwise specified herein, the majority-vote shall decide all questions brought before a meeting.

SEC. 4. The deliberations of the Society shall be governed by the provisions of "Cushing's Manual."

The wirth regular meeting of the Margare Electrical Society occurs at 8pm Thursday, May 19, 1881, in the Philasophical Scoture Ream of Caper Union Chapter the Van der Meeyde will red a paper on Rahint broggy with Mutations Mymay 17/11 Jumorden Seay m

Menlo-Park Ry
Dear Sir.
Sometime ago I was informed that you had requested FW Jones to find you an assistant and that I had been recommended to him for the place Whereupon I wrote to mr Jones expressing a desire to abtain it. Mr Jones recently informed me that my letter to him had bun referred to you, and that you had indicated an inclination to give me the position When you got your system of lighting in Tuspork ento aperation, I write to you direct in order to present my application from being overlacked or forgation, as I halo myself in readiness to accept the position forgorder et offers a reasonable advancein Ralan, and prospects over my present foretion with the Western Union to in this place, I am a worker and a student and I think that I possess the the qualifications in knowledge skell and Exercince which would enable the to be of Considerable service to you. Mry Asspectfully Yours & Monitap.

Modelaniors Gh. 26.8 Somlap

was with In on Saturday lash, a four ideas han occured to me which perhaps may acceptable advantage to both If you remember for spoke lof gr was for wished me to indelectable I don't Pre miless it was Summing a Steam Engine which you afterwards spoke allot of I can some for in an inay Whatever in Faris I Thale be most happy

to do so as I have at make them by contract - all previous time done what by the other hand if ever would forward for for have any prestion for interest whether or with it has can give me independent been to py own benight. Now of Mi Dean whom I repent Il was thinking of for have in some ways, but most any speciality you wish to preatinely decline to be get manufactured that work sulordinate to, feeling mour an expenditure of a sure from pash experience few hundred dollars I would that I can serve for to try to establish a few a better advantage without tools for that purpose and any connection whatever devote my time solely to I have as perhaps for the furtherence of your success Know been very importante It would not matter in Sutherto in coming in contact what capacity so long as I with and been compelled secured on adequate rema (in some measure) to be - neration for my services - substitude to inferior of for have any specally persons to far as practically of Small world for four was invened, but I thenk according to the future decline according made I would serving my other person other then they direct implies.

On extended experience in all branches of my Cinciness make me to Walnabele ever again to take my position in america (unless that it heromes abolitely necessary), without it heing where I can be useful and by usefulner he appreciated . shall call and see for tomorrow evening as assauged When I trust we may come to some terms, I think you have seen enough of me to Know my reliableness and Ming Capacities, I have always heen steady, prompt and ever read, to further the interest of my employers from the Moment engages and adapt by self to heeds whatever they were Jours hey Jest & el facteson

I write to inquire whether you can furnish employment a young man at your workshop at Minlo Cark. I would like very much to get a situation where I can have an opportunity to improve myself in the practical study and investigation of all that applies to dectricity and dectrical and Mechanical instruments, and experiments, and I know of no better place to apply at than yours, where, if I am correctly informed, there are constantly experiments in progress under your superviewon. I am twenty years of

age, um of an inventive turn of mind, and have always manifested a desire for clechicul and mechanical study, having learned telegraphing and worked at it some time. I have also taken a course of lessons in drawing at the Maryland Institute here, and have been a subscriber of the Scientific American for nearly five years, during which time I have always tabeen the deepert interest in your inventions, illustrations of which have from time to time, appeared in its columns. have lately invented several

new improvements in electrical apparature, but have not yet patented them, not having the

means to pay the expenses at present

percent.

It would please me very much if you can find place for me in your establishment, and I will do all in my power to serve your interests in whating capacity I shall find myself in your employ.

Afring to receive an early answer to this letter, I remain Hisperifully Jours,

en Sir. I am a brother-- in low of Col. Toursand, your manager in London. I have got into a little Equable with an editor in vindicating you (though you don't need my support) and I begyou to let your occretary inform me immediately how long a time the Electric highty burned continwoush in Mento Park since you started them about last Christmas, Also be Kind swough to tell me the rame of the contrary organized to furnish The shettic hight in the hower part of New York . If the system you invented is at present applied for the purpose of lighting any city roportion of a city,

I should be hoppy to know it.

Don't you hold the majority of shares in the Preport Company?

I be you proposer if I want impersionet. I am moved to trouble you only in the interests of touth, Allow one to offer you may dincere of profound congratulations, and to about you for gratuation, you as great homefactor if the trumen race, May cordially or expectfully, My Corwinst,

[AUGUST 19, 1881]

my Kenny Johnson Thank ( with beamed Chaf the Maxim Co have by their would mercepe and alexa succeeded in attaining Contract for lighting one afete Prima Rin familionis. as against us, This is pretty wough when one omerdien that what they put on is one of the want shaweful infrançamente that such Existed that an unimportant decroim an the potent of sorting waller

is represented to the Paring RR affecting our potule o giving their quelle, The when it is a hatorians from from for throughout the world int Ashand Even have been known to a Panna Office of that et though but the 184 . Chatsuld of that "Scientific impossibility the subdings of the Elistic Light wa accomplished by me . all the means a method;

and started one would naturally suppose that to Even a house world Know that the means to methods of Longet wanted bring to mie & not to a proate Composition on the feeld own a year ! afterwards = I be not the or do not care the slightest about any money was could make

out of the Penna RR but It seems a little rough Stal this contract should be gwan to real forms we would not stoop to folio clatements, and Especia Cly when one Churchen that the Exhibition afters very light has brought our 70000 people courthe Pluma RR to ace it in operation at ments Park bund that long before

these protes started in business - 9 undustand you are acquainted by the Mr. Cassatt, would you not go and place this water before him, and Explain the hier of these infamous shysters,

Morte any 19 = 1661 My DI Johnson I have just learned that the Maxim dight 6 - have by their usual misrepresentations obtained a contract for lighting one of the Venue RR Ferry Boats por against our Company. This extin on the part of the Penna Co is Daid & have been influenced by the late unimportan decision of the Patout Office upon the therm astatic Regulator - an entirely foreign matter to the present state of the Electric dighting problem. Dis paid that this decision has been used by the ousview to to give Color to the cetterly galac Claim that they have the degas position no sucandescent lighting while I Que the Pirate : & seems & me that of all men a Peun : OR official chauld Know that that " decentific suprasibility the out division of the Electric digle Was accomplished by me - thy me alone - at Reulo-Park- Why! the Thibition of this very thing that is now Claimed by Others - brought

2

to Meulo Park Over Towo people long before Maxim or any one, Else audertook to solve the problem" In view of this fact alone in aleur passing strange to me That any official of the Penn's allo chould not see that the means vmethods of daing the thing thouse much of necessitie Velong to we - Rud not to a pirate Who appearing on the scene many Months after I had proclaimed to all the evered that the great antral fact had been accomplished and was showing to thousand the Moder Operandi by which it Was done -I case withing Whatever for the Money Considerations invalved in this matter with the Jenne G. but I do case for the most Effect of their decision against Me. It is disgraceful beyond neasure that because we will not stoop & counter lies Mis representation that so Dignal aipostiae offseeld be done as by a great Corporation.

نے

as to the other point upon colice their decision is said to have been reached. Viz: Ruperior Economy = You wice secoquizing at once a simple fraud - It is notorious that they Can get but 1/2 the He of Lamps of a given candle power- her Korse former that we obtain : ouch a decision Could Only have been reached by the of a false Statement, both as to thier own I our extended among Vastress this & you as & Judenstand you are you old Venu alk man and Koosa agranted with Vice Fresh Cassace & Other Count RR people; & can probably obtain from your friend of one a hearing. My Telations Pack present It come with the Pena - Co - as a resident on their dive Aporton of no inconsiderable moment should also entite ne to this- Please see them on this ardiech & report to an Yours mily Thosa Edison

l The a Edison Defor On a trip through New-Mexico aryona & South " Calfornia & dies Covered a very peculiar fibrons tree, of Which I enclose herewith a sample - as you will observe, there are two varieties of Ufibre one of which partales Somewhat of the nature of Cane or bamboo, which I am told you are using for "Carbons" in your Electric Light - Perhaps may be found to posses value in that direction - Of so I can procure any quantity you may desire. The tree is of the Caches species and I am about to introduce the fibre into the manufacture of paper and several other articles - Would take pleasure in forwarding to you a larger quantity if you can make it useful. I will

also enclose a pample of the fibre (market No 1- which has been treated and reduced to pulp for paper manufacture. Examined under a glass it will be seen that the fibre is almost indivisible. The sample of pulp has not been bleached but is proceed by the bleaching process - Manghlur tells me your Company will require large quartities of lapper of I have control of a good Copper mine in New Mexico and would be glad to combete with others to supply you with Cop-per- My address, should you disine to Communicate with me will be Santa Fe New Mexico after this dateAmerican Light

Office of the Chief Signal Officer.
Washington.

Dear Sir: I regret exceedingly that Mr. King's recent balloon accertain should have reached so speedy a dermination abrendered it impracticable to make a longer use of the excellent little electric lamps which you furnished for the occasion. I take pleasure in acknowledging the favor conferred would

ask your commands for the disposition of the lamps, and which if any, charges you have entered against thus office on that account

is the following is the lamps- one found broken on unfracking, three broken in enperimenting, four now at this office, and four on the way, for express,

Mr. Moore: --

I enclose a letter and cutting from the Phila. Ledger reporter for your information, which

please return.

Land Lucull

de la france and the or high

Office of the Hublic Hedger, Philadelphia, October 187381 Mr Thomas A. Edison Dear Sir: - I was glad to get your note and to learn from it that my motive in writing to you had not been misunderetood. In will see from the enclosed "local" from yesterday's Ledger that I was agreeably sur-prised by the efficiency of your light under und favorable circumstances. At the same time I think it better outed for emaller workshops. At Baldwins

the their night they ran it up very high until the place was illuminated as though by voltain are lights but the averal lampse (I think kleven) gave out in a clost time. I do not doubt that you can got as much effective light for one dollar as byte only of the voltain are systems but the trouble is to make the you are around a shall do what I can to have the today of the public understand what you are around at I shall do what I can to have the tiding light given fair play in that as in other respects of talkfully yours.

Again thanking you for your kindly interest, bolivoins,

Yours yer; truly,

October 20th.

My Dear Br. Glass: -

T am almost ashamed to sit down to write to you as T have given your letters the go by so long that T am thinkind you have got the impression that I did not intend to answer T hardly like to set about excusing myself so will shaply say that inasmuch as T have to put in eighteen hours solid work every day, Sunday and week days, with the most charming regularity, some of my correspondence gets overlooked. However, Prank No. haughlin just came on here and he says if T do not write to you he will shoot me. So rather than become a martyr T will send you a few lines of explanation as to the electric light. T was fust looking over the applications we have got from San Francisco for the franchise for that city and T find that there are about twenty some of which are from extremely good meople so you see what you ! have got to start out against. But I hope that a little watchfulness when the time comes to close up a contract for San Trancisco we shall be able to get it for you and your associates. I enclose you herewith a few circulars which we usually send out in answer to applications for general information and if you give them to your friends to read it may in a very few words give them some slight information of our system. I also enclose you circular asking for information as to the lighting consumption of a given city. You must use your own discretion as to answering this. I would not go to much trouble about the matter. I simply send it

to you to show you how systematically we set about our work. I also enclose the agreement between The Edison Electric Light Company owning the patents and The Edison Electric Tiluminating Company of waw vork who are going to undertake the general distribution of electricity for light and power throughout Manhattan Ts-Tand. This will give you some idea as to the nature of the agreement which will be made as to other cities. I think that the best thing for you to do is to got just the strongest people you can and put in an application for the franchise for San Francisco. It would be as well to have the application sent by yourself and all Four associates and address it to The Edison Electric hight Compuny. If you send it to mine or Mr. Edison's care T will write a note and get Mr. Edison to sign it so as to place on file the fact that he is desirous that when the franchise is granted that it should be given to you of course all things being equal tas to Position and solidity of your associates, but upon this point T um sure there will be no trouble. T do not think the company will enter into any very serious negotiations until we have the first staion started here in New York. You will appreciate how much better will be their position byhen Fr. Edison Has placed beyand doubt the practicability of electric lighting on general distribution as opposed to and in competition with gas. They will be able to get a much better price for their property. Mr. Edison is very hard at work here preparing to light up his district down town about which I told you when you were here. We are making the

machines down at our works at Goerck St. just as quickly as possible. We have men ungaged laying the street mains at the rate of from seven hundred to one thousand feet a night. (we do not work during the day at this work. ) At our central station in Pearl St. we are now engaged in the installation of twenty-two hundred horse power Rabbook & Wileox Soilors and are also putting up a structure for the purpose of carrying the dynamics. We have the houses wired down in that district having obtained contracts by which we shall replace with electric lighting minety per cent of the total gas lighting of that district which is about three quarters of a mile square. The gas companies are beginning to get somewhat seared down there now and we understand that they are refurning to their customers the money deposited on the meter. On agin told as that they not only returned him the money but also twonity two years interest added. Everything so far as inventing goes is absolutely completed and has been for some time past. The only trouble now is in the securing of machinery and if we affect get that tomorrow we could light up within a bouth. However de matters go at present T do not suppose we shall get started before Pebruary at the carliest. Send on your applicationdand do not think that because I have been so remiss in my attention up to this time that is is chronic with me.

vory truly yours.

17038 Walnub ll-Ghiladel Ga, Oct 28 Mr. Thro. Edicon Draw dir - In yesterdays paper I read that you had tric land. Will wriftsame tell me if the glass or shell inclosing the carbons is not larget than a nichelpiro cent pian? also what a fire to te coulle fower lamp would cont by the hundred show many cells would be orgained

Menoranda by J. a. E. Boo. Aganization of Office

DESCRIPTION of Dr. A. Paccinotti's Electro-Magnetic Machine, from "Il Nuovo Cimento," June 1864, Vol. XIX.

-----x0x-----

Translated by Henry Wilson, Assistant Librarian and Translator, Dritish Musaum, London, W. C.

See note at end.

In 1960 I had occasion to have constructed at the expense of the Cabinet of Technological Physics of the University of Pisa a small model of an electro-magnetic machine devised by me, and which I now intend to describe with the special object of inviting attention to a particular sort of electro-magnet employed in its construction, which, besides being a novelty, seems to me adapted to afford more regularity and constancy of action in such electro-magnetic machines at the same time that its form appears to me convenient for collecting the sum of the induced currents in an electro-magnetic machine.

In the ordinary electro-magnets, even when fitted with a commutator, the magnetic poles usually appear in the same positions, whilst by using the commutator which is joined to the electro-m magnet which I am about to describe, the poles are moveable in the iron subjected to magnetization.

The form of the iron in such an electro-mag

2.

The form of the iron in such an electro-magnet is that of a circular ring. In order to conceive the motion and mode of action of the magnetizing current, let us suppose that round our iron ring is r wound a copper wire covered with silk, and when the first spiral is complete, that instead of continuing the spiral upon the wire already wound, the wire is closed by soldering the two ends together, thus covering the iron with a closed insulated spiral with a single direction.

Now if we establish communication between the two poles of a battery, and two points, at some distance from each other, in the wire of this spiral, the current bifurcates and runs along the wire in opposite directions from the point of communication, and the directions which it assumes are such that the iron when magnetized has its poles where the electrodes join the spiral.

The right line between these poles may be regarded as the magnetic exis, which may, by changing the points where connection is made with the battery, be made to assume any position transverse to the figure or circle of iron of the electro-magnet, which I would here call transversal electro-magnet. The two portions of the magnet on either side of the right line (in our machine it is the diameter) between the points of communication with the electrodes from the battery may be considered as two electro-magnets placed opposite each other, with the same poles face to face.

To construct upon this principle the electro-magnet with which I have mounted the electro-magnetic machine, I took a ring of iron, turned (in the lathe,) having, like a cog-wheel sixteen equal teeth, as outlined in fig. la of the plate. This ring is sustained by four spokes of brass ansat[rig.4) which unite it to the axle of the machine. Upon the teeth of this iron wheel are small triangular prisms m (rig. 1 e 4) of wood and in the intervals between them is wound the insulated wire thus making so many spirals or electro-dynamic coils well insulated. In all these coils some of which are lettered r (rig. 3,4) the wire is wound in the same direction and in each of them makes nine rounds.

Any two consecutive coils, for instance r r are separated by the iron tooth of the wheel and the piece or triangular prism of wood mm (fig. 1,3,4.) In passing from one coil (or reel) to the construction of the next I left a length of the wire free attaching it to the piece of wood m, which separates the two coils. I carried these lengths of wire, one end of which constituted the terminal of one coil, and the other the beginning of the next, down upon the axle M M (fig. 3) to which is attached the wheel above described, passing them through, holes bered in a wood-on commutator o (fig. 3) which again has the same sxle, and then eltering each to the commutator of the the commutator.

This commutator consists in a low cylinder of box-wood hav-

ing two series of notches round the extremity of the cylindrical surface into which are inlaid sixteen pieces of brass, eight at the superior and as many at the inferior edge, the former alternating with the latter, all concentric with the wooden cylinder. slightly projecting and separated from each other by the substance of the wood. In the figure 6 of the commutator the pieces of brass are indicated by the shaded spaces. Each of these pieces of brass is soldered to the corresponding length of wire which couples two coils. In this way all the coils communicate with each other, each being joined to the one immediately after it by a conductor of which one of the brass pieces of the commutator forms part, and hence by making contact between two of these and the poles of a pile by means of two small metal wheels  $\underline{k}\underline{k}$ (fig. 3.4,) the current bifurcates and runs along the coil on each side of the points from which the lengths are left which are joined to the two communicating pieces, and the magnetic poles manifest themselves in the iron of the circle in N. S.

4.

These poles N. S. are acted on by the poles of a forked electro-magnet A. B., which determine the rotation of the transversal electro-magnet about its axis M. M; since in even when this is in motion the poles are always produced in the usual positions N. S. which correspond to the communications with the pile.

This electro-magnet fixed as shown in figures 3 and 4 is com-

6.

posed of two cylinders of iron A B

posed of two opinions of ron A B

sprileation of a compare exhibited a distinct intensity, even

action having treversed cupric sulphate or vater acidulated with

6.0 Although it opposes that the second method is united by
a cross piece P P of iron to which one is permanently screwed,
and the other attached by a srew underneath 0 which permits it
to slide along a groove, so that the poles of the cylinder A B

may adjusted nearer or farther from the teeth of the wheel.

The electric current from the pile entering by the electrode  $\underline{h}$  passes by a wire to the communication  $\underline{l}$  and thence to the small wheel  $\underline{k}$  circulates through all the coils of the (large) wheel, and returns through the communication  $\underline{l}$  which by another copper wire sends it through the coil which surrounds the cylinder A. Issuing again from this it passes to the coil upon the cylinder B, and is conveyed by another wire to the second electrods  $\underline{h}'$ .

I found great advantage was gained by joining to the two poles of the forked electro-magnet two armatures of soft iron AAA, BBB, each of which embraces more than a third of the circle round the wheel which constitutes the transversal electro-magnet.

These armstures were placed pretty close to the teeth of the the wheel, and united by brass guides ER, FF, as is seen in the horizontal projection (fig. 4.) These armstures are omitted in the vertical projection (fig. 3) of the machine because they

would have inconveniently conceeded the coils and teeth of the wheel. The machine acts even when the current passes only through the circular electro-magnet, but has much less strength than when the current passes through the forked electro-magnet.

I made some experiments, taking into account the mechanical work which the machine produced, and of the corresponding consumption of the pile.

In these experiments the following method was observed.

The spindle of the electro-magnetic machine hore a reel or small drum ( QQ, (fig. 3) around which was - thrown an (endless) cord which was also stretched round a wheel of considerable size. compelling the latter to revolve when the electro-magnetic machine was in motion. The axle of this wheel was horizontal, and round it was wound a cord which raised a weight. At one extremity of the horizontal axle of the windlass was a break the pressure of which was so adjusted that the weight to be raised was sufficient to put the whole apparatus including the electro-magnetic machine, without the current, in a state proximate to that of motion, owing to this arrangement when the machine acts, the mechanical work expended in overcoming friction is equal to that employed in raising the wie weight, and to obtain the total labor performed by the electro-magnetic machine, it was only necessary to double that obtained by multiplying the weight attached by the distance it was raised.

Having thus estimated the mechanical work effected, in order to ascertain the amount of consumption required by the pile performing such work, a cupric sulphate voltameter was included in the circuit of the current, the copper plates being weighed before and after the experiment.

I will give the figures obtained in one of those trials with the transversal-electro-magnet machine. This machine which had 30 a wheel of Centimetre's diameter was moved by a Bunsen Battery consisting f of four small elements, and raised a weight of 3<sup>K</sup>, 2812 a distance of 8<sup>m</sup>,66, the friction being subtracted: thus mechanical work was done to the amount of 28<sup>m</sup>, 415.

The positive copper of the voltameter a lost 7.24 weight, the nogative gained 7.235, so that the mean chemical work in the voltameter may be regarded as 7.229. This number multiplied by the proportion of the equivalent f of the zinc to that of the copper, and by the number of elements in the battery gives 7.951 as the weight of the zinc consumed. Hence in order to produce a kilogram-metro of mechanical work 33 milligrams of zinc were consumed by the battery. In another trial conducted with 5 elements the consumption was 38 milligrams for every kilogram. These results if they do not prove the new model notably superior in form to other electro-magnetic machines, still do not seem to me bad, when I reflect when it has faults of construction which are not found in other machines of the same kind. One of these defects

which should be noted is that the commutator is formed of brass and is not well centred on the axle so that the contacts are not always sufficiently complete. I was induced to construct the eloctro-magnetic machine upon the system described by the following reasons: 1st, In the arrangement adopted the current never c ceases to criculate in the coils, and the machine is not kept in motion by a series of impulses succeeding each other more or less rapidly, but by a couple of forces acting continually. 2nd, the circular construction of the rotating magnet contributes together with the preceding mode of successive (successive) magnetization to give regularity of movement, a minimum loss of actual power in shocks or in friction. 3rd, In this it is not sought to effect instantaneous magnetization and demagnetization of the iron of the electro-magnets, a course to which obstackes are offered by the extra-currents and the compulsive force of which the iron can never be completely divested; but what is sought is only, that, every portion of the iron of the transversal electro-magnet subjected to the suitable electro-dynamic forces should pass successively through the various degrees of magnetization. 4th, And the extended armatures of the fixed electro-magnet continue their action upon a considerable number of the teeth of the magnetic wheel and do not cease to act while any magnetism remains in them.

5th, While the number of the sparks is increased their intensity is much diminished, since there are no strong extra-currents due to the rupture of the circuit which is able to remain constantly closed, and while the machine is in action only an induced current continues flowing in a direction opposite to that of the current from the battery. The value of the form here described may, as appears to me, be increased by the facility it affords of transforming the machine from an electro-magnetic into a magnetoelectric machine with continuous current. If instead of the electro-magnet AB (rig.3,4) there were substituted a permanent magnet, and if the transversal electro-magnet were made to rotate, we should have, in fact, a magneto-electric machine which would give a continuous induced current constant in direction. In order to find the most suitable position for the contact-makers upon the commutator where the induced current is received, we observe that by the influence exerted upon the moveable electro-magnet the opposite poles assume their positions att the extremities of a diameter and before the poles of the fixed magnet. These poles NS maintain a permanent position even when the transversal electromagnet rotates upon its axle, hence with respect to the magnetism. and consequently also to the induced currents, we may consider (or suppose) the coils of copper wire wound round the circular magnet as revolving and the magnet itself as stationary.

To investigate the induced currents which are developed upon these coils let us examine one of them in the various positions it can assume. From the pole N (fig.2) in the direction of the pole S; here is developed which flows an one direction until it reaches the mean point a after which it immediately

#### posed of two eylinders of iron A. B. assumes an inverse direction.

Then proceeding from S towards N the currents maintain the same direction they followed between a and S, until they reach the mean point b, from b enward the direction is again inverted, and is the same as that from N to a. Now as all the ceils communicate with each other, the electro-motive forces acting in a given direction will be cumulative and will give to the total current the disposition (disposizione) shown by the arrows in figure 2, and in order to collect it the most convenient positions for the cont/act makers will be a. b. that is the cont/act-makers on the commutator are placed at right angles to the line of magnetism, ( i.e. Magnetic axis) of the electro-magnet.

The induced & current varies its direction changing the direction of rota+ion, and as to the commutator, when the cont\_fact-makers are in the diameter which corresponds with the line of magnetism, although the electro-magnet may be rotating, they do not collect any current. From this position by placing them above one side a direct current is obtained contrary in direction to that which would be obtained by placing them upon the other.

In order to develop an induced current from the machine thus constructed, I placed the two opposite poles of two permanent magnets near the magnetic wheel, or magnetised with a current the forked electro-magnet already there, and compelled the transversal electro-magnet to gyrate. By both methods I obtained a

continuous induced current of constant direction which upon the application of a compass exhibited a distinct intensity, even after having traversed cupric sulphate or water acidulated with S  $\mathbf{O}_{g}$ 

Although it appears that the second method is inconvenient, yet it is easy to replace the temporary magnet AFFB by a permanent one, and then the magneto-electric machine which results will possess the advantage of giving induced currents, cumulative (sommata) and all of the same direction, without need of mechanical appliances to separate them from other contrary ones, or to render their direction common.

And the present model well shows how the electroemagnetic is opposed to the magneté-electric machine, since in the first the electric current circulating through the coils <u>r</u> introduced by the electrodes <u>11'</u> the motion of the wheel and its méchanical work is obtained, and in the second by the employment of mechanical force to rotate the wheel there is obtained by means of a permanent magnet a current which circulates throught the coils and goes to the electrodes <u>11'</u> in order to be applied to whatever it is desired to act upon.

#### Note of the Translator.

The above translation would have been made more readable had not the time allowed for its execution been so extremely limited. It should be remembered that no books are allowed to be taken from the Museum premises, and that their use is therefore restricted to the hours during which that establishment is open.

The preceding translation will however be found accurate in essentials, and is for the most part closely literal. It may be noted that the ward axle is used by the translator to denote a spindle or real mechanical axis, and axis to indicate the imaginary straight line between two poles, or an imaginary exle.

H. Wilson.

#### 1881. Electric Light - Edison Company for Isolated Lighting (D-81-021)

This folder centains correspondence and other documents relating to the business of the Edison Company for folloated Lighting. This company was organized in News to the purpose of selling and installing small power plants for the lighting a fingle bullings. In addition to correspondence, there is a circular announcing the formation of the company and the availability of its stock to investors.

Approximately 40 percent of the documents have been filmed. The following categories of documents have not been filmed: form letters relating to stock subscriptions; routine notices for meetings of the board of directors.

## The Edison Electric Light Company,

65 Fifth Avenue.

New York, November 11th, 1881.

CIRCULAR.

The large demand for apparatus for lighting separate buildings, such as factories, machine shops, public buildings, summer hotels. &c., has made it necessary to provide a special capital for conducting this class of business.

It has therefore been determined to organize a new Company to be licensed by this Company to operate in all territory in the United States, outside of present gas limits, and within such limits in such special cases as may be approved from time to time by this Company.

The capital stock of the new Company has been fixed at 5,000 shares of \$100. each, of which 2,510 shares (\$23,000) are to be issued to this Company in payment for the license, and 2,400 shares (\$24,000) to be reserved to provide the eash capital required. 2,400 shares of such reserved stock are now offered for subscription at par.

Books of subscription to the capital stock of the new Company will be opened at this office, on Monday the 14th of November inst., and remain open until Monday 21st inst. at 3 o'clock P. M.

Preference will be given to subscriptions received from stockholders of the Edison Electric Light Company to the extent of the pro rata share of each according to the stock, standing in their names on the books of the Company at the closing thereof on the roth inst., pursuant to notice heretofore given, (viz. one share of the new Company's stock to every two shares of Light Company's stock.) As no subscriptions can be received for fractional parts of a share, persons entitled to fractions may subscribe for the number of full shares next above or next below the fractional amounts to which an exact pro rata distribution would entitle them. All stock not subscribed by the Light Company's stockholders will be allotted, immediately after the closing of the books of subscription, to other subscribers, in proportion to the number of shares subscribed by each.

Subscriptions may be made at the office of the Edison Electric Light Company 65 Fifth Assume. New York. or by filling up and transmitting to the undersigned the accompanying form, together with a cheque for five per cent. (55 per share) on the number of shares subscribed.

A deposit of \$5 per share will be required with all subscriptions and a further payment of \$10 per share on allotment, the remainder will be payable in such installments and at such times as may be called for by the Board of Directors of the new Company.

By order.

C. GODDARD.

Secretary.

Plagler My, compensation for acting as President of the company was fixed a call was given me for one year at par on stock left in the treasury, which will be about eighty share Now does this last matter suit you? it as T had about as soon work for nothing and take my chances by and by as accept a call like that. It was Banker's suggestion. However, it went on the minutes of the meeting and T am willing to let it stand. S.B. Eston Fovembe 23rd. 1881. per He. G.

lining&TrigatingCompany Logan peturned from tent Lorse hast week and brought one the letter from you concerning Electric light business - Dostan myself very fortunate to be joined by collagan in The enterprise - as it will releve me of almost the entire care make the venture an imquestioned Incares from the outset - out he mangerated with. I could hope to make - at the same time Yell hor much I am indebted to you for your Kindly interest, which although it would, under any sircumstances, have been socredly considered by both the major and Jimmy, of course, would not have been by other parties The Major as you are probably aware was already an egital partner with me in the matter, though he was, and will be, promotontly occupied he could not have given it much forward attention My brother -in-law , Salin , Aught Gold restock - Selephone

and messenger systems of S.F.) was also associated with in and he and I proposed to work the enterprise together -He will now assist Jumy and Levil divide my interest with him - What selected and seen about Break Bank Cal 4, 9.0. Berlins, present for of botato, and of large 2.5. Shipping from - Bartlett Doe, heavy real retate owner worth about five million dollars and Joh. A. Thepard of Judent shepard all of whom I think are known to chajon - and they all agreed to become applicants - I was myin Dan Fran one day and thought it best to wait until some I got the form of application from Mr Swell, before completing the list which I perfored to make about ten - Jimmy will take there, or acleat others as inannustances may shape themselves in his negotiation A. (Logan) is a showed, Kees business man of great turity and most in gratisting manners all will accomplish are he undertakes by - I fell into a hornets nech in San Fran! walked into a gas companys den, monopeotingly - I want to preden who is a man of great wealth and influence in sinand me of myddich + best friends. I found he had gone largely into a new gas ampany, now starting, and was entirely exceptical about your light - I prepresented to him all you work doing in hew Jorse, the magnitude of your worsts, and what you told me!

- and it pather staggered the old man! It pequested me to go with him and are martin, the promulgator of the new gas co which I declined to do, but he so reasone, and invisted that I could not refuse without striking my colors in a around, Do to Maritimo we would, That gutteman proved to be a smooth, conceiled feelow, with The assumption of the sociel - He immediately informed me that he there you intrinately had gone to your es-tablishment with an Electrical Engineer to examine your system, while you were at Hendo, Having on unlimited amount of money to invest in case he should be patified of the ultimate success of your invention . that you treated him with the greatech Courtery, extending him every facility for examination and himself and engineer had determined, that it was " simply in possible with your system to ever compete with gas, ir in fact to make a precessful or economical light by the incondiscent plan, that the present agitation was solely for stock perfores, and he amilingly and patronizingly advised one to shop the whole project!

What do you think of that? - It made me hot and I comply asked him whether he did prot think, he might have been hasty or premature in his examination, Whether he or his engineer had gone sufficiently depint The problem, or had such prior trumledge as would enable them to form for themselves on Thus so percepting a judgement! Then we had it! I told this had no figures from you beyond the more statement that you could paroduce a chiaper light han gas - and quoted Sawyer at him - I expended he would class Mrs. as a montibank, but stronge to say he did not seem to Theor of him, and I offered to produce my published authority from a man not friendly to you against his mere assumptions - but had a warm conference, with the most positive statements competitely at variance on each side - and an armed occutrality at the close - Do you know the man? - He told me among other things he will manufacture gas at fifty cents a thousand feet in Landsen has a new services, obtaining forlifter then could fish from a confidence of furnity annahing to award quently good amount per tradeum for the hose actually to make for them the military of forther and is an approximant fellow, of when I thank military of when I thank military of which I thank military and the property of the work of the confidence of the forther and forther thank the property of the is not in some work of the property of the confidence of t Credit for the aim I have orained - Ramember on

## 1881. Electric Light - Edison Electric Illuminating Company of New York (D-81-022)

This folder contains correspondence, agreements, and other documents relating to the operation of the Edison Electric Illuminating Company of New York. Formed in December 1830 to build generating stations in New York City, the Object of the Pearl Street central station, which began operation on September 4, 1822. Company and a draft of the Cardinance allowing the company to lay underground conductors in New York City. Thee is also a prospectus for the United States

Approximately 80 percent of the documents have been filmed. The following categories of documents have not been filmed: routine notices for meetings of the board of directors; duplicate copies of correspondence.

after carefully going over the ground I really see no sales'factory and rapid way of letting the street conductors excepting by bringing both ends to the surface at the street corners. It well greatly hasten the laying of the mains because the men can work as rapidly as possible and the complete lesting can be made at any hue afterwards.

in complete working order , in practice it wie be found necessary alstated periods afor an inspector to lest the Condition of each face of every block. For this work also it is necessary to have access to both cables and also to interrupt the eincuit of both at each corner. It seems to me that the advantages for testing, saving of time, allowing rapid progress in laying sadaccessibility for inspection wie for outweigh the first - cost of such a system and udeed mee page

The beamings of the sanzalian states are the Sanzalian

Third. Whereas the Edison System of Ricciric Lighting, referred to in this agreement, necessitates

Spread first, and on the found by Wall Street: mal, Second, a station of about the same area or tigoral first edging, but because in what is known as the uptown portion of the City of New York, the same to be presented because in any to agreed upon become the parties beard. The locationary of the said first section may be result of the contract to be under the parties beard as the contract of the said first section may be result of the contract of convenience or concessor, or for other good reason, by and with the concess of the Light Company.

Third. Whereas the Edison System of Electric Lighting, referred to in this agreement, necessitates the subdividing or breaking up of the area of the City of New York into a large number of sections, or stations, to the number of about thirty-four below Seventieth Street in said City, two of which are above described; and whereas it is the intention of the Light Company to hereafter Beanse the Illuminating Commany to use the said Edison System in all of the other said sections or stations of the City, provided the Hiuminating Company shall exploit or introduce the said System in said remaining sections of the City with reasonable rapidity fit is agreed that the Light Company, which, under this agreement at present Recnees the Illuminating Company to use the said System only in the two sections above described, will hereafter license the Illuminating Company to use the said System in all the other sections or stations in the City of New York as aforesaid, provided the Illuminating Company, if the Light Company shall so desire shall occupy and equip at least four of such stations annually, beginning October 1st, 1881, and shall ntroduce the said System into as full and general use in said stations as possible with due diligence, such occupation and equipment of said stations to be uniform, as regards extent of plant and appliances of all kind appertaining to the Edison System, with the plant and appliances of either or both of the first two stations above described. If the Rituminating Company shall fall or neglect to exploit the System in the remaining sections of the City as above set forth, viz; at the rate of four sections per annum, (unless such default be at the request of the Light Company), the Light Company shall have the right to license any other party or parties it may select to occupy and equip any remaining station or stations not already fully occupied and equipped as herein provided for, and further shall have the right in all respects to treat and deal with the said additional party or parties, as regards said remaining sections, with the same force and effect as if this agreement with the Huminating Company had never been made.

Fourth. The price to be paid by the Illuminating Company to the Light Company for the licenses and benefits herein mentioned has been fixed at 35 per centum of all stock issued by the Illuminating Company, of which I0 per centum shall be paid to the Light Company in cash, at the par of such stock, and 25 per centum in fully paid up stock, it being the intention of this agreement that whenever the Illuminating Company shall issue any or all of its present stock, and as fast as it shall issue the same and whenever it may hereafter increase its stock and make issue of all or any part of said increase, and as fast as it shall issue the same; that the Hilluminating Company will pay to the Light Company a sum in money equal to 10 per centum of each and all of said issues, and shall also issue to the Light Company 25 per centum fully paid of each and every issue of steck as aforesaid, to the end that for every one hundred shares of stock issued by the Hiuminating Company the Light Company shall be entitled to and shall receive 25 charcs of said stock fully paid, and in addition thereto, a sum of money equal to the par value of ton of said shares. Should the Illuminating Company in making issues of its steek permit payments thereon in installments instead of requiring payment in full at once, it is agreed that the Light Company shall accept its 10 per centum of each compensation above provided for us fast as, and only as fast as, the said payments in installments shall be made, provided however, that is no event shall a subsequent issue of stock be made until the payments on all prior issues shall have been made in full, and provided further that whenever any issue of stock is made the Light Company shall promptly and without any postpone ment whatever receive its 25 per centum of fully paid stock of such issue, as above provided for.

Fifth. Instrument as It is deemed by both parties important that at the beginning of the introduction of the Dilson Bicotic Lighting System, and for ensuring the threatment with a larget Company shall others with a larget, the preparation and installation of the plant required in each and every scales on establish adhented to under the responsible owners and attraction of the Light Company, in orderio insure life the time being the besselt of all the sepretumes of the Light Company, in softer on demploying, lifely given and that the Light Company, afthing pick oversion from the Light to the Light Company, the officer oversion for the Light Company, the officer oversion from the life of the Illentation Company, shall give loves for the Illentation Company, afthing pick oversion from the Company is company, afthing pick oversion from the Company is considered from the Company is the Company in the Company is considered from the Company is considered from the Company is considered from the Company is the Company of the Illentation Company is considered from the Company is the Company of the Illentation Company is considered from the

3.

tell, spreiches and pay for all machinery, lamps, material, mount and appliances that may be accounted to the neglectionstone and reprintment of the Light Company for the securities to present the control of the part of the control of the part of

Sixth. If at any time hereafter it shall, in the opinion of the Light Company, be for the benefit of both parties to this contract that the Huminating Company should give its own orders directly to manufacturers and should itself become a purchaser of plant, or any part thereof, it is agreed that the Light Company shall supply the Huminating Company with all requisite drawings, specifications and models, completed and perfected so as to enable the Illuminating Company itself to contract directly with manufacturers and not through the intermediary of the Light Company for the manufacture of the requisite parts of a complete plant; but in such case it is agreed that no change whatever shall be made by the Illuminating Company is any parts of said System without the consent of the Light Company, and also that the Light Company shall, through its officers and engineers, have the right to supervise the manufacture, setting up and installation of any and all plants or paris thereof thus obtained, to the end that no interference or disturbance of the general System of Electric Lighting of the Light Company as the same is now perfected, or as the same may be hereafter changed or improved in the future, shall be made, but that the said System as a whole and in all its details shall be under the exclusive and entire central of the Light Company; and in no event shall the Illuminating Company ever use in any part of its plant, or in connection with any part of the System of Electric Lighting herein provided for, any new or different machine, method, material or appliance, without first obtaining the consent in writing of the Light Company. But it is further agreed that the Illuminating Company shall hay to the Light Company the actual cost of the services of engineers, draughtsmen, and other skilled labor required in making drawings as aforesaid, or in superintending the installation of plant as aforesaid, provided such charges shall be what are customarily paid for services of like characters'

Seventh At the present stage of development of the Edison Electric Lighting System it is impossible for the Light Company to state otherwise than approximately the cost of a plant for a section or station, but it is the judgment of the Light Company, acting in-good faith towards the Illuminating Comrany, and desiring so far as may be to afford in advance every possible information apportaining to the cost of a plant, that the cost of the plant for each of the two sections or stations above specifically described, will be as follows, viz: the cost for the plant of what is called the down-town station, exclusive of a building to be occupied for the boilers, steam dynames, et ceters, will be about \$250,000, and the cost for the other, or up-town station, also exclusive of said building, will be about the same amount. The items of machinery, lamps, material and appliances constituting each of said plants and the cost of the same so far as can now be foreseen by the Light Company, are set forth in detail in a schedule herete annexed, marked Schedule No. 2, for the down-lows section. And Schedule No. 3, for the up-town section; and it having been herein provided that the Light Company will act as agent of the Illuminating Company to give orders for purchase and pay for the said plants, it is hereby sureed that the . Huminating Company. will in advance of giving said orders deposit with the Light Company the estimated cost of the same as tast as such deposit shall be required by the Light Company, it being understood that the Light Company shall not exact from the Illuminating Company as aforesxid larger advance payments on account of said plant from time to time than in the best judgment of the Light Company may be necessary to secure itself from loss in connection with the said orders. It is further agreed that if the cost of the said plants should exceed the estimates as set forth in the schedule, or should any change be made hereafter by the Light Company, or under its direction, whereby the cost of such plants shall be increased, the Illuminating Company shall bear flie cost of such increase, and famish the mensy to pay for the same procisely as if such increased cost and such changes and modifications had been originally sofforth in thissurroment and in the schedule hereto anneved.

Eighth. The capital stock of the Hiuminsting Company, which is now fixed at \$1,000,000. shall not

be literated without the consent of the Light Company in writing, and without the lease and delivery to the Light Company of the proportion of said stock tegether with the cash payment as above provided for; the tooking been contained shall prevent the Lights Company from disposing of its socio, in the Illianinating Company from time to time, should it cave to do so either in whole or in part, as to the Light Company shall seen been.

Nikel. As softlibeast compensation for the benefits granted by this instrument to the Illuminating Company; it is a benefit agreed that the Illuminating Company; it is not of Effective shall always contain two divideous who shall be nominated by the Light Company, and ashall be closed by the a solution for the Illuminating Company, and it is further agreed that one of those two divideous shall always be a member of the Pinnedal or Encoder's Committee and of all other committees of each Board of Direction of the Illuminating Company.

Finel. The Illuminating Company shall not mortgage lis properly or declare any early or stock disducted without consent of the Lighth Company. Theorem enemy is needed from time to time to further the number of sections or stations, and to except and equit his same, such money shall be prometed by Increasing the expiral stock of the Illuminating Company and shall not be obtained either by betweening or for value the exception of the Illuminating propany for each prometer.

Exercit. The Huministing Company shall not the first days of Amanyr and July of cash year, sweezelity graphs a full propert, verified by a dat of the officer beat sequalated with the details purporting to be Significan in said report, of the businesse of the Company for the next preceding six mention, and the Light-Company shall have the tight to present on form or forms for such reports; and the Light Company shall have the right as surpressedant time and by antentry of the Board of Directors or Executive Committees on examines the books and accounts of the Illuminating Company, and the latter shall on demand of the Light Company shays furnish every reasonable facility for some examination.

. Refold. The Huministing Company shall not purchase may patents affecting the Ethicon Systems ( Electric Lighting in any of the details welpieren, nor shall in Social may lineaus for any such platent, with one first definite to the Light Company the night to obtain such placents or send illocane, for the use of all list Henome, at the same price and upon the same terms and beamse can be obtained by the Huministing Company. If the Light Company either finite of ecitions to wall there of the pertiques of private any of the private of the pertiques of private and private. Investigate we describe the wall then of the pertiques of private and price of the pertiques of the private of the private of the pertiques of the private of the pertiques of the private of the pertiques of the private of the pertiques of the pertiquence of the p

Théoremis. The Light Company names and reserves to fined the right to presecute and destined all earlies affecting the validity of its petents, and will upon notice from the Huminsting Company prosecute all indigenous of earlies placed in the territory covered by this agreement witnesser in Light Company, having in view the Infection in and inventions and Licenters Patient in other positions of the United States and elementers shall cover its lightness and appear to do so a paid in the brindy agreed that witnessers are actions affecting the patients of this Dajak Company shall be commenced against the Diminsting Company, of what its many control in the regarder covers of its business of the budges of the bu

Fourtenth. This continue shall continue in full force and effect during the life of any or all of the patients which the Illuminatiny Company is Bicensed to use under or pursuant to this instrument, or which is may becaute be Bicensed to use by the Light Company.

This Company has contracted with the Societe Anonyme des Cables Electriques, of Paris, France, for the purchase of the Berthoud-Börel patents for the United States of America, and propose to manufacture and lay underground electric cables both for telegraphic purposes and lighting and for telephonic purposes.

The Berthoud-Borell system is pronounced by prominent electricians to be the best system hitherto devised for solving the problems of underground electric cables, and is in extensive use throughout France and on the Continent of Europe.

The problems to be solved, in order that the accomplishment of the object might be effected, were two in number: first, that a method should be invented by which a great length of cable might be manufactured at once; and secondly; that an insulating material should be found and applied in such a manner as to be less expensive than gutta-percha. These difficults are successfully surmounted in the process of Messrs. Berthoud and Bord, by means of which great lengths of cable may be manufactured very rapidly, and at a great saving in expense over any process previously in use. A copper wire is wound in cotton and bathed in a parafin and rosis, the whole hermetically inclosed, in perfect contact and under pressure within a lead envelope. This is the new cable reduced to its simplest expression. Cotton bathed in parafin and protected from moisture is an excellent insulator. Experiments already made on an extensive scale, have proved that it may replace gutta-percha and india-rubber. Moreover the new cable, being mechanically and speedily manufactured, and with cheaper insulating material, is naturally cheaper than the cables herectoor in use.

At the recent French Exhibition at Paris, the Company Jablokoff made use of these cables for sending the current to the electric candles and to the different motors in motion. 15,000 metres of Berthoud-Borel cables conveyed power and light to different parts of the palace. 5,000 metres were laid by the same company for Jablokoff lights at the opera.

The cable with many conductors has been placed in sewers to connect the Ministry of Posts and Telegraphs with the Exhibition. Some kilometres too have been laid already in sewers for telephonic purposes. New and extensive contracts have also been entered into with the Parisian Telephone Company.

The electro-static capacity of these cables being twice less than that of gutta-percha, they need twice less electricity to be charged. This would prove of great advantage in submarine cables and also in long lines of underground cables. Another originality of the new system is noteworthy. With the ordinary cables, to avoid as much as possible induction from one wire to the other, each circuit must have one going and one returning wire. With the Berthoud-Borel system the lead coating may be put on each wire, being insulated to be used as a returning wire. Lead is not so strong a conductor as copper, but the section of lead being relatively considerable, what is lost in conductibility is gained in diameter. This is naturally a great economical advantage.

The French Company has extensive works at Grenelle, in Paris, and another at Cortaillod, near Neuchatel, in Switzerland.

When the cables are to be placed in the earth, they are passed twice through the press so as to, receive two lead coatings, between which a water-tight substance is introduced. With this treble protection, the new cables brave the inclemency and influence of the weather.

It is naturally quite feasible to introduce many wires in the same cable, so as to have cables with seven, eleven, fourteen, &c., conductors perfectly insulated from each other.

The Societe Anonyme des Cables Electriques will manufacture and ship full and complete machinery for the purpose of putting into practical operation the Berthoud-Borel system in the United States, and will send skilled machinists to explain and superintend the working of the same.

#### 1881. Electric Light - Edison Electric Lamp Company - General (D-81-023)

This folder contains correspondence, agreements, and other documents relating to the business of the Edison Electric Lamp Company. Most of the correspondence is by Francis R. Upton, treasurer and general manager of the company, and by Philip S. Dyer, secretary. Many of the letters deal with company finances. Some relate to the acquisition and testing of bamboo samples for use as filaments. Other material concerns the purchase of a new factory building, During the year the company changed its name to the Edison Lamp Company.

Approximately 99 percent of the documents have been filmed. The following categories of documents have not been filmed: routine correspondence regarding the shipment of lamps; duplicate copies of selected documents.

A ORREBIED T, entered into this eighth day of March 1981, between the Edison Electric Light Company, a corporation organized unser the Laws or the Mate of New York, and hereinafter called the Company, party of the first part, and Thomas A. Edison of Monlo Park, Middleson County, State of New Jersey, party of the second part.

#### VITHESSETH:

THEREAG, the Company is by assignment from said.

Edison the present comer of various inventions upon which letters patent have been greated or applied for, relating to Electric Light, and is, by contract entitled to the conversity of all such other inventions as may be hereafter made by him during the period of five years from the twelfth day of January, one thousand eight hundred and eighty one, and is desirous of preseting and encouraging the manufacture in a skillful and responsible manner of incumdencent electric lamps to be used under the Letters patent, and inventions aforessed.

AND THEOGRAP the said Edison enjoys in an expectal manner the confidence of the Geograpy in respect to skill, ability and integrity, so that the said Company is willing, with such mid-safe guards in respect to its future business as may be right and proper to confer upon the said Edison the exclusive right of manufacturing in the United States incandescent lamps to be supplied to the licensees of the Geograpy in the United States or under the conditions here.

inafter expressed for expertation to Foreign Countries for which the Company does not own such inventions.

AND VHEREAS, the said Edison is villing and dominous to-onguge in-such-business of manufacturing, and-to-downto his best skill and ability, not only to producing the best skill and ability, having respect to durability and the quality of Light and concept of minimismone, but also to reduce the price of the same from time to time to the Geometry, preserving only a suitable manufacturer a profit, and to join with him charles matchedor, Francis Er Upter and Edward H. Johnson who are expert and experienced persons, also enjoying the esteem of the desipany in the resuperstances.

AND THE SAME, it is mutually concerned by the parties,
PIEST. That the said Edison and his associates,
must have such assurance of being continued in the exclusive
samufacture above referred to, as can properly be given to
justify the expenditures requisite for providing the samufacturing plant needed to meet the demand of the Company or
its accounts for lamps at all times during the period of
this contract and

That the company cannot put the nanufacture of its lumps so whelly out of its control that fullure or inability of the said Edison to supply the desands of lidensees might Joopardize the prompt or profitable introduction and adoption of the Company's system throughout the

sucer such &

United States.

#### IT IS AGREED AS FOLLOWS:

- I. The Company does hereby, subject to the stipulations hereinstor provided, license and agree to license the said Edison with the exclusive right to manufacture, within the United States for consumption therein, the incomdensent limit now, or from time to time used in connection with the Electric Lighting System or said Edison exmed by the Company, and will not license the introduction into the United States to be used therein the many or similar lamps or numuractured electric to be used therein the many or similar lamps or numuractured electric or by other parties as hereafter provided.
- the exclusive character thereof modified, as hereinarter provided continue during the life of all and each of the Letters patent for inventions of said Essuen owned by the Company, under which such incundescent lumps may at any time be made.
- pared to supply, and to supply promptly, all demands by the licensees of the Company within the United States for such lamps at a price not to exceed thirty five cents per lamp, surely packed for transportation in boxes of one half gross, delivered at a railway station ready for shipment, and from time to time to reduce such price as improvements in the art of manufacturing or other educes hay make such reduc-

tion possible, it being understood that at a price of thirty five cents, a not profit of three cents per lump may be made and is adequate, and that a greater profit may be based

as the business of manufacturing mar continue and develope.

It is further agreed that the said Edison will omdenver to reduce the cost of manufacturing the standard lamp, and that whonever the cost thereof shall fall below thirty two cents each, he will pay over to the Company one " half the difference between that price and the actual cost of the lamp manufactured, and that on the first of January and first of July in each your, said Edison shall render to the Company an accurate statement of the number of lumps manufactured during the proceeding six months and the actual cost thereof, and if such actual cost shall be less than thirty two cents, said Edison shall pay over to the Company one half the difference between such actual cost and thirty two cents each for all lamps for which he may have received payment during the next proceeding period of six months, and the Company, by its officers and agents shall have free access at all times to the manufactory and books of the sai Edison and all other books connected with the business there

In seteraining cost, the total manufacture or output during the mix months whether for the Company, or for
foreign expert shall be taken into account and the average
cost of all the lesses manufactured during said six months.

of for the purpose of verifying the statements so made. -

shall be taken as the actual cost of a lamp under this contract.

TV. The said Edison shall invest or procure to be invested in actual such immediately not less than Fifty thousand bellars (Sid and) for the establishment of a suitable sanufactory capable of furnishing one thousand laups estable during each and every working day in the year, the investment already made at Monle Park for that purpose being taken as a part of the suse, and will thereafter keep himself adequately prepared to supply lamps to the licensees of the company when called for in the summer hereinafter pre-

In order however, that the maid Edison and his associates may not be under the necessity of making large expenditures for manufacturing plant in advance of the establishment of the Edison Electric Jighting System, throughout the United States, or upon an uncertainty as to the armount of lamps that may be required by Licensecs of that may be required by Licensecs of that may be required by Licensecs of that occasion from from time, it is further agreed that the company shall, shonever it grants licenses for the unse of its lamps or system in any territory within the United States give notice thereof to the maid Edison with the name of the licensec, and will require from such licensec a notice of the number of lamps required by it for initial install—ation and the time when (not less than three ments after the date of such notice) the mass shall be required, and the Company will transfer to the said Edison full information

thereof, and will also, upon his request, obtain, so far as possible, such suitable security or payment in advance, in behalf of the said Edison as will justify him in building such additional buildings or machinery as may be requisite to supply to such licensee, within the time netified, the lasps required for initial installation, as well as for suggesting and thereof or the territory covered by the licensee and thereof it shall be the duty of the said Edison, on receiving due payment therefor, to supply at the time number to such licensee the number of lasps called for, and therefor to keep such licensee fully and promptly supplied with all lasps required for maintenance in such territory.

In all business connected with the supplying of lumps the Gempany will get us the agent both of the licensee and of the said Edison.

Ho order shall be received by the said Edison dirictly from any licenson, all orders shall pass through the Company and all drafts for paysont shall be made upon the licensed through the company as such agent, all shipments and deliveries shall be made only under the direction and control of the Company, but no compensation shall be charged to the said Edison for such service or intervention.

It being essential for the protection of the interests of the Compuny, that its licensess, who are by this agreement virtually restricted to one manufacturing establishment for their supply of lamps, shall be neverthen

loss, at all times, able to procure the same of a muitable style, quality and character, with promptness and despatch, and that the despatch shall have full power to protect itself against being hindered or delayed in introducing its lighting System in all parts of the United Statem, it is agreed.

That all lamps manufactured shall be of

- one or more standard sizes, styles and grades, to be fixed and determined by the Company and from time to time altered and modified by it, so as to enable the Company to require the introduction from time to time of all possible improvements affecting either the style, economy, durability or other qualities of such lamp, provided however that any such change which shall make necessary the use of more acturial, or that which is more expensive, or shall enhance the labor of making or hundling shire lamps, shall be made the subject of a revision of price, preserving the same relative proportion of outlay and profit as is fixed above, and in cuse of failure of the parties to agree, the revision shall be made and fixed by a compount arbitration to be appointed in the manner provided for by the Seventh Article hereof.
- (2). That the diagrams and drawings hereto amoved marked "Echibit A." are to be taken as establishing such standards for the purposes of this agreement, and un" til the scale shall be medified by the decapany.
- (3). That the said Edison shall deposit with the Company Perthwith complete working gravings and models

of such lamp in all its different forms as now made, and that thereafter, during the continuance of the contract, full and complete duplicates of the same and working dramines and made is of all improvements, changes or modifications thereunder, and of all machinery, tools and applications of every kind candoved by said Patern or big survividance.

of every kind employed by said Edison or his associates in the manufacture of such lamps, or in any say commested with the manufacture of the lamps or any part thereof, shall, with full specifications of the same be promptly deposited with the company.

(4). In case the said Edicon shall fall to supply all the lamps required by the licensees of the reachest and any of these as the same shall be sulted for, the company shall have the right to manufacture or came to be manufactured by others, such an amount of lamps as may be in its judgment required not only to supply the amounts in which the said Edison has been deficient, but also to guard against future failures of a similar character.

This stipulation is however intended to have a reamonable interpretation viewing all the difficulties of thesaid Edison in building up a new business in which unforcsoon obstacles may be encountered, tending temperarily to emburrass him in the performance of his contract without him fault, and also viewing the necessity which the Company is under to make its territory promptly available by providing ample resources from which its licensees may obtain sumplies and with all these considerations in view it is agreed that

the Company must necessarily be, and shall be left free to judge from time to time, acting reasonably and with good faith, whother the resources and management of the said E :ison are such that he is liable to fail in supplying the lemps which have been or may be required by its licensees, and noting upon such judgment and in good faith the Company " shall have the right, after any failure by the said Edison" to make or cause to be made by others such amount of lamps as may, in its judgment be requisite to supply past deficioneies, and to guard against the contingoncy of future failure, and to soll and dispose of the same as it may think proper, but it shall not have the right to manufacture or authorize the camufacture of loaps by other persons, except to such limited extent as may soom necessary for the purposes above set forth. In contracting for lamps with any other manufacturor, or in providing means and appliances for such manufacture by itself, it shall be at liberty to provide of contract for such future supply as will justify the orfigural outlay for plant to cover the actual or possible do-

VI. The said Edison shall have the right, without revalty to manufacture lamps for expert to all foreign countries, other than those in North and South Aserica, but notice shall be given to the Company of the time, place and amount of each expertation before shipsent of the cause from

ficioncy sought to be guarded against.

the namurantery, and the books of entry or servespendence relating thereto shall in the namer be, at all reasonable times, open to the inspection of the company. But this right to make the spect shall not be allowed to the proof with the proof filling of orders given by the despine or its lightness, and the designed of that decapacy shall always take procedures of shipments to foreign dountries.

VII. Should the said Edison continue, after the expiration of one year from the date hereof, during any period of six successive months, to fail in supplying the requirements of any one or more of the Company's licensees, it shall then be at the option of the Company to terrifinate this exclusive license, but in that cade it shall, if required by the said Edison, take over the manufactory and other property erected or provided by his for the purpose of such manufacture, at the actual cont thereof, with a fear allocance for depreciation by use, such valuation in case the same cannot be agreed upon by the parties, to be fixed by three competent appraisors, one to be chosen by such two-ones party hereto, and the other to be chosen by such two-

Should heaver the said Edison in the case provided for by this Section clost not to make such requirement, it shall be the duty of the Company to deliver the orders of the liest liesmoon to the said Edison for such amount or emounts of Image as he may have furnished at his average daily output for the three months next proceeding any notice by the

Company of its invention to terminate the exclusive license, but as to any excess which in its judgment may be required thereafter by the licensees of the Genpany, it shall be free to manuracture, for authorize the manufacture of the same by other parties as provided in the foregoing clause.

VIII. In case the said Edison shall supply or sail leages to any person or corporation in the United States other than the Histoness of the Company, or except upon an order in each instance made by said licenses through the Company, or by the Company itself, or shall fail to keep proper books of account for the purposes berein provided or shall refuse access thereto to the Company's agents, at any proper and reasonable time, for the purpose of steer-saining the cost of sich manufacture, or shall fail to furnish models, working drawings and specifications, and deposit the same promptly with the Company, or shall delay the supply of the Company's licensees by engaging an art for foreign countries without the comment in writing or the Company, it shall be at the option of the Company to reveke all Heenses granted or arising hereumeer.

IX. In case the company shall become the communof any other letters patent or inventions, or licenses therefor, or any tools, machinery or appliances useful in manufacture of such lumps, the company shall authorize the said.

Edison to make use of same for the manufacture authorized by this contract during its continuance.

Should the said Edison or any of him associates above massed at any timeshoreafter become the comers by purchase or other rise, of any letters patent, or inventions or Marmon therefore, or any tools, and therefore

useful or necessary in the minimizative of such heaps, he or they shall license the company of such persons as, after fallure of the said Edison referred to and provided for in the foregoing claused hereof, the Company may find necessary to capley for supplying the deficiencies above tentioned.

It shall be an obligation of good faith binding upon the said Edison and shoover may be associated with himand derive the benefit hereunder, to take all licenses or right to use the inventions of others in such form as to be able to convey such right of use to the Company upon the contingency last above stated.

prompt notification shall be given by each party of every acquisition of the expension, or the right, to unough for a patent capable of use in or about the managementuring or handling of said lamp.

X. Whomever, for the purposes of this agreement it shall, from time to time, be necessary to determine the actual cost of the numeracture of lumps packed and delivered for shipment as above described no componentian shall be allowed the said Edison, but there shall be allowed to fair and usual componentian for the actual services of the

maid Nationalor, Upton and Johnson, such as is customarily paid in manufacturing ostablishments for similar services, but no account shall be made of interest or inventments wither in plant or stock.

XI. In case the said Edison should, by reason of death, disability or any other cause, be unable or fail to give his personal skill, ability and experience to the manufacture of such large it shall be at the option of the tempany to terminate this contract and all licenses and privileges arising thereunder.

But in case such Tailure whall be without the fault of said Edison, the company shall purchase or procure to be purchased all his canufactory, works machinery and applicances at a fair valuation to be appraised in case of disagreement between the Company and the said Edison or his personal representatives by an arbitration in the manner provided by the seventh Article hereof.

TH VITIESS WHENCOP the said Edison Ploatric Light Company, has caused these presents to be subscribed by its President and its Corporate seal to be hereunte affixed and attended by its Secretary, and the party of the second part has hereunte set his hand and seal the day and year first above written.

### THE EDISON ELECTRIC LAMP CO.,

Menlo Park, N. J., May 10

Thosa Edina OLD.

Made several expenients on the power of the Elich Cumit to carry liquids (mater Asulthine acid) through a prious partition, from one to the other of the less legs of a White ! The lover part of the tite und, was 18 mich diam. the lip were about Brinch diam. The glass was melted down note the proons pling. I had to use an air pump to draw the liquid into the tite, on account of the plung being so tighter alone in texture. I used two Billeen ales, Run two fine platimum miss into the legs. The action is so complicated, Considering the Temperture, Poroxiety of the partition, strugth of surrent to, that it will orgain much work to five the proportion of cumul and workdome. I can not say prictionly that an action does, even occurs, but think then is although with the above amount of battery power the increase in wither leg is less that that due to variation of temperature, between day and night. The same figures would be carried as the metals from Carton & Line.

Resport forms G. acheen It was a serious con the THIS TELEGRAM HAS JUST BEEN RECEIVED AT THE OFFICE IN 791 BROADWAY, near Tenth Street,

The boadley has more everything of feehed and ready all in the case. He will start authing steel his below making which the carters which were high resistance due to the final heat are all right they are making a fine curve and their reistance is low John John

Ties elegented gentre onmy return abaence from business of afairdays, of your favores of the Extre enclosing Min. Edison's mortgage for tom. Edison that whenever he will hay off his rule for Br. 000, the Peter Dity Co, will hay off the him a clear title.

EE Lange Co, Meulo Park, n, ill at the time of the sailing of the last Steamer from Ris de Janeiro I failed to report progress as I should have done Since my last, written from O'c amined the different Kinds of bamboos for morning plants from Ris, all along The southern coast of Brazil, and as far as this I regret to day that out of seven ferent qualities of bamboos, large inough you purpose. there is not one that promises even straight and regular fiber as that sent me in your letter the Asiatic specimens of March 4. The surface is generally rough and the grain open and irrigular. In and about Riv de Janeiro, but more especially an any about the city of São Paulo, some of the austice bamboo is grown as hidge, and if I had Taken the true to look it up in very omall quantities out it and dry it I might have been able to Que you a half a ton or purpage a whole ton from the latter place. But it is quite impossible to get this smooth bamboo, the kind you are already receiving from Asia, in any quantity in Brazil. at any price whatever. The Brazilians cannot be

said to cultivate this bamass. They plant it for helps but that is as far as their care of it gors. They would till you that this is a native bambas, but it is not. Of the nature Kinas I have collected samples, which I have not sent on , principally because juspose I have kept them all however, and will send theme , together with a number of palm and other fibers, when I return to Rio ar Janeiro. I good on my arrival her in Belong Ante that the reports of large bambook for up this new, are well formed a soly arrived here yesterday, and on the 100th I report to beauce Montevictor for Chinash or any other housest the house Curaba or any other point Toward the head of me manigation that is likely to gove the most satisfrom what & can gather from the people living here and I it would be immunely more advantageous to find the right Kind of bamboo a other fiber our this river and in this Republic, there finding the It same material in the Brazilian Empire. In the last mand country, I have been treated with aniversal Kind a) mill in ness Officers of state have given me letters and aided me in way way in their power; in short 111 1,119 their hospitality has been unsurparied. But as far as my you are concerned, that is not to the point . It has 2000 10 where any Kind of labor is involved nothing can helx

peeter of Brazil. In the first place, The natives are ignorant of the value of money, and except in certain localities like the mining regions and in the sea port towns it is with the greatest dixficulty one can hire a common laborer; and leven then he feels ender no obligation to remain with one a minute longer than he may choose to as as. On the lower Amazon when the only work is that of ruther gathering, unskilled laborers can make such enormous wages cutting the rubbu trees that they cannot be hired for money Of this however, I will speak more July in my friel report. I have seen the palm producing the peculiar fibe called "piarsaba", one Kins of which grows at Bahia. There is nothing new to report about it, as you have already had and experiments with it. I have been shown another quality of pralm ficher from the supper Ris Negro in the bally of the amazon, and not of the kind generally exports from that segron to England. The operimus I can were amount straight of an even size almost from one end to the other, and of a light or way ashen color There are some of the finest or rather layest bamboon in the world growing on that river also and on the Orinoco, and I had dicided to go at once to that region as soon as I return from this trip up the Ris de la Plata, unless otherwise ordered les you in the meantime.

I have written hastely to cottle to-day's mail by way of Europe . Altho the report is not a patisfactory one, it will serve to show that from the Cape of St. Roque to the mouth of the The ar la Plata, nothing can be expected. After exploring this river I will found the am agonian region, and then go to the mest braces was the The Orinoco, subject to your order and suggestions. The money allowed me is sometimes too much and concerns not enough, so that I feet manage to make both ends meet. I have not sent or any report yet for the reason that in changing from one country to another, I have been dealing with so many different · currencies that I am not able to reduce it all to dollars and cut without considerable labor in which I am not skilled. The money is orans in pouras steeling, and has been reed in Brazilian, Montevidean, and Argentine currency I thought I was a ruined man yesterday when I was charged \$100. for getting on show and \$50, for breakfast; but I felt a little better when I found that it was all only about six dollars in American money. my address till further notice remains, To OC James, Ris de Janeiro, Thigie Feligraph address. de la Min

a arrived at this place July the 13th from Quiaba, distant about 100 miles. From what I learned at Curaba before coming her, I was induced to believe that it would be cheaper and quicker for me to return to the valley of the Amazon by going down the Ri Tapajor from the place, than to return by way of Buenos Aires and Ris de Janeiros. But it is imporcible to get bustworthy information here upon any subject, without going to the shot for it. La I find in arriving deer, and after having brought every possible influence to bear on The merchants who navigate the Lapajor, that the voyage from here to Stacketow at this Time of the year is infracticable, very dangerous, and buides everting one ten times no much as I rager to pay, would require about two month to be made in. I mught have got around the matter of expense, by taking only two or three men and a small canon, and the dangers would have taken care of themselves, but my time is always so short that I could not afford to love two months from her to staitleba on the lower Tapajor. The guarana muchant some times and canous down from here in the mouth of sec., when the water is high, and when the wild berians are inland. At present they say that the falls are extremely sangerous, that the fevers are mon so, and that the Indians come down to the river during this the

they sension and one more unhalthy than the Jewers, blessing the celay that going dever more wants auxiet me to , July it wiew to return to the amount region rie.

Res de Janeiro; Buenos Rvies, and Para.

Our coming to Diamantine however, I have been ask to see and get camples of the bambas of these highlands of the tropics, and to see a member of palms under different ein-cumulances. I will tring camples with me, It is my opinion though that there is nothing here that can be called good. I leave how to morrow morning for builda, on my way back to Rio de fanciro, where I will go to Para by the first oteame. In case I receive no order at Para to the contrary I will go up to the head waters of the amount to be what that region furnishes, and also to the pressure districts of the Prio Fegro, where I shall try to get the prises. ba fiber of a lighter color. After going to that region my Time will be about up, and there will be no Time left for me to go to Caba. I will go Then Though if you wish it, and will give me two or three months more time and the necessary means. If you choose to have me go to Cuba thew, please telegraph me at Para and telegraph the money also. In telegram coming to me there before the first of actober, I will return to the. States directly.

Samuel Insull Esq, Dear Sir -

If agreable will you lindy send me on sott mist. check for J.C. Branners Salary for July and august. You will recolle A that on June 30th las you sent me check for "200 for salary of may and June. I received a letter from Mr. Bran-When today dated July 1st. The was then at Cicaba, Promise of Malto Gosso, Brazil and expected to undersale , soon after the trip from there down the Tapajoo to the amazon. Very Frely your Ghelps Thos. A. Edleon, Ches. Batchelor, Francis R. Upton, Edward H. Johnso

Menlo Park, N. J., Seft. 1, 188,

Dear Mr. Edison: I have
tried on any times the
orcillating device. It seems
to do some good though
the record is against it
as the fumps broke quicker
then regulars fut up at
the same time. Yet I
am of the opinion that
the pumps take the air
ant quicker and with
takes bothing the same
have bothing the same
have bothing the same
the sacurums and fund
out.
Jam Jam has ordered the

iron for the troughs above. He took an angle fine as the best he could find. The farties of whom he ardered it will do the We have tried Ca Cl in a frump and in three cases running obtained resistance I lamps, with apotted carbons. a pump with Li. Cl is running but works showly Welsh is writing for new doors to the funnie before trying the carbonying in way your suggested. The weeks now and were fromised ten days ago. He is trying the weight

to show you the last sets.

I am now trying in every fast to tring obour the trackage. The records from the pump oron about that I have reduced it to less them 'he whit it was three munths ago. I keep a full account of leach moun's work there. I am hunting if where the lamps bout their various.

this cause of about fine he cent on its lamps.

Jours Touris R. Mptin.

for I find a los due to

Dear Sir:

Ne are
extremely surry that fault
ahould have been formed
with the lamps shipped
To Newburg.

No text every worket
hefore sending them away
to are if they are broad

before sending them away to are if they are brose that are bose. We are aware that by retrying them some can be bround though me take every bresanthon that his

heen suggested. We think that the man who fut the lamps in at newbury must have taken hold plan and the plan trud them of and lamps in the workerto the will he extremely happy

as we do not intend to have any and jo out of the flace. Cracked or cristaled carbons are good so for as the lasting qualities and econolis are concerned. at 35 cts. for lamps we do not see how we can select them our contract. In throwing aride The crooked of irregular cartons we should be compelled to charge more for those that are perpet. Comiding the expense it would be to us; 50 cts, would be a much fairer time

and for that fine we will give your selected langes with straight carbons, well placed in globes and firm sockets tried with I from trust. This, any order that comes to us marked selected we will pick out as mentioned. In time we hope to have all our lamps with perfect looking carbons at 35 cto. but we can not now do that without in account only labor and materials used. Yours Truly Estien Lamp Co

DERIC ADAMS, SELLOR AT LAW, Nowark, N. J. Oct. 29. 1881

J. A. Edison, Eg. no. 65 Fifth Au newyork City,

Dear Sir, On referring to my letter of ang. 30. Ifind that it refens to the tax for 1881 on The Harrisonproperty, as a lien payable bythe Peters. myg Co. I find, on Examin. ing the Charter of the Journ of planison that taxes become alien on July 20, which to later Than is the case in newark, or under the General Caro. As your agreement was made, another paper are all vatermay 9. die tax falls Fyon youwillre-menta that now 9th is the day for closing the matter. I felicitate you a your triumpho young truly

apparis,

The Edian Lamp Co.,
Meulo Back A. J. Cuttomens J am array to any that up to
" answer to my letter
+ mae, or remain asking you whether I should return home at once, or remain here to do further exploring, or go to the West Indies.

The mails to this place from New York are irregular and innectain since the removal of the american line of stumers. But I have thought it my outy to await your answer, and in vivo of the fact that I might as well be at work & while I am waiting, I have taken upon myself the respromability to draw upon you for \$200 in order to be ask to me the some Since I arrived her on the some into I have been confined to my room with the fringle fever until within the last few days. I am now able to travel and will leave her for the fiber producing districts of the Rio Negro on the 2th of Nov! I will be back here in about the weeks or a mouth, and will follow out the orders I then hope to find here from you.

I have some good samples from Bahir, and some formelle bamboos from the Pavice Olate, or Paisagnay rather, besides a number of less from my property and a country afford to send them on at present, on account of the state of my frances. If I am ordered home I will bring them with me, and if I am to ormain here still longer it will have money enough to be able to ship them.

Your idea of making carangements for the chiffing of a flow that is not known to have any commendcial value at present, is impracticable for this country. If a fiber is found which will make it worth agone while to as so, you will have to send come one out to teach the people what is wanted and how to prepare it. For known fibers or plantsit is easy enough to make arrangements, and I have already made such arrangements when fibers are articles of export. I will not enter into a detailed explanation of this matter at present though, Ju it would be more than you would can to read. I have dine; and shall continue to do all in my power to semi your interest; making all arrangements and collecting all information possible.

Draft. I drew on you before I left Rio Julios, and again yesterday I drew on you got 200, This last drays was made through Sam! G. Pond Ho, of this city and of 174 hall It. My. South payable at oight. I have stated on them that they are on my personal account, but have done so only because I have no authority from you to draw on the account of the Company. In that matter I have none to deaw on my own account, but I hope you will see that is better that I should have done so than that I should have lain here idle to await letters which well arrive, no one knows when. I therefore beg you to honor these shape, and of I have made a mistate in drawing Thew, of course I hold

myself personally responsible to you.

ble or you. Yourse very repetfully Holm b. Branner, Odduss, To New Sondon & Brazilian Banto, Poula

"Branner", Pará

Referring to my letter of the 23th Mr. goddard informs me that the Edison Electric Light Youmany will seat the draft for \$100. of Mr. J.C. If the draft should be presented toyou please pay and apply to the Light Co. to reimburse

you.

Dear Mr. Elin : fetting is out mining in new him and finished the civitales so as to our the lawks on the humps with two E. M. L. I have also put to away fully on the contradight to away fumps between 80 and r. p. m. We change Thursday from mercury suls to the new steppers I have contracted with Doe for 100,000 of the . new style at 1/2 ct. cack,

I thought it was well to encourage him as he has dine good work and obtained excellent nexults. He has a very good experimental turn and will be unful to w. . Howell is now in the fump rooms and intends to take twenty- fine pumps during the day time and to work off experimental lamps and keep the words of them on the tumps. were make that were very poor. I have been ofer all our curve sheets and reex animed all the to see of manufacture to see of I could find the trouble.

I admit that we have not taken curres as often as we should and as flow as her shall in future that in lasting back I know that we have tried. In the photo room we have had more than a chare of trouble. in charge, Dr. Nichols, Human Marchall who died, and Howell. Now I have another Manhall who is just boken in. Every new man has to go Through with a certain of experimen with the instruments and is complled to give their time almost entirely to keeping them in order so as to much the Volto cometty on the lamps.

Another reason is that we have worked as many pump orders that we felt a little ause of being all right. If feel convinced most that the only wry to have that lamps is to make life test, and this I shall be. I the first part the lamp is doing the first part the lamp is doing the last part is guildly abnormal is guildly abnormal to have term lamps token from east day ran well right own last day ran well right own last day ran well right own and last them to condition of the lamps to the condition of the lamps with

We have noticed that

the lamps that are three the quickest, and that a lamp is aft to become the immediately before We have had a good curve from the Nama stak and 9 think something may be made of the stock. By some overight Welsh but in there rems of reduced an home and it is from these that the foor curves have been made. The customs were high from lack of final heat then they were put in plimitage and reheated. The holy was excellent and I thought they were

all right for they had every appearance of good every affermed of good carbons and 9 told him so. He can get these carbons with a very small shrink. This was the templation, for he wanted a good We are fixing his fur and in top as the old one was very bad .... Segmann Tis now making the new moulds having the tools and the cample all right. He formises the whole by the middle of mixt week. I think they will be chong enough for one to a ample gip without tools.

We ove the Coming \$3900 for face, they alk for \$1000 on assumet of July hills. I think it would be will to pay the full amount as they are doing very well by us a new audit with them Holyon is taking steps to have the lamps sealed much atronger than before and orders worked different ways. We are wing flatimm wire harden drawn than at one time as it makes much finer inside parts and is less aft to break. I shall try some order numbers on plating though 9 think there is little

chance here is we have

gove back to anot wind

go we want originally,

with finding thinks

I am thing all I can

to improve the lamp and

bring it up to the old

standard and anche 600

hours within the truth

#### 1881. Electric Light - Edison Electric Lamp Company - Accounts (D-81-024)

This folder contains correspondence and accounts relating to the finances of the Edison Electric Lamp Company. Much of the correspondence is by Francis R. Upton, general manager and treasurer of the company, and by Philip S. Dyer, secretary.

Approximately 50 percent of the documents have been filmed. The following categories of documents have not been filmed: routine correspondence regarding outstanding accounts and checks sent to Edison for endorsement; bills and receipts; bills of lading.
